ENERGY LITE
PVC WINDOWS

Quality

The modern technology and high quality components used in Energy Lite's production guarantee the highest quality of craftsmanship, which is verified by state of the art in-house testing laboratory and by various European and American testing agencies.

Durability

The multi-chamber frame and sash construction with added full parameter steel reinforcement come together to provide a durable and reliable window, guaranteed to provide the customer with years of maintenance free usage.

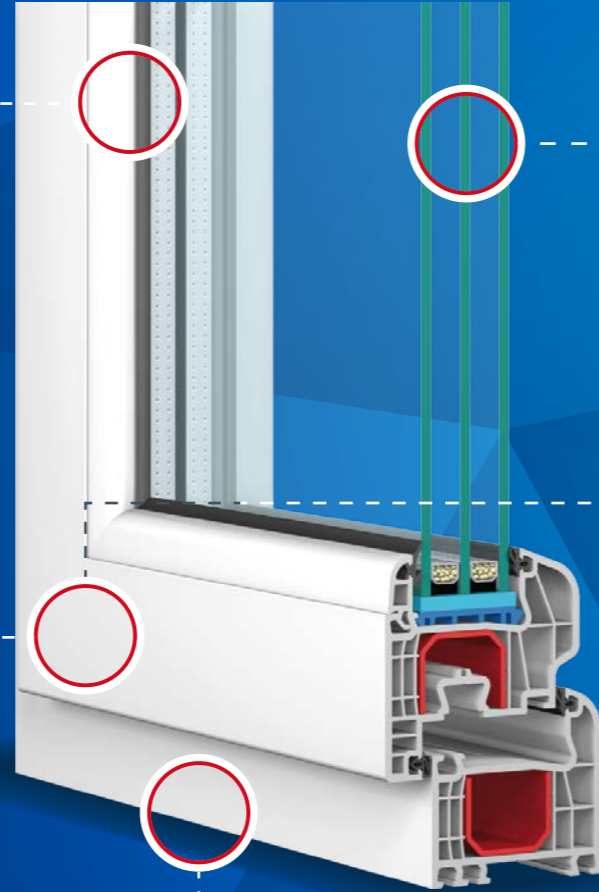

Aesthetics

Energy Lite windows are a combination of innovation, functionality and ground-breaking solutions in energy-efficiency, and its sophisticated elegant design. Windows can be built in variety of shapes including round, trapezoidal or arched. The shape of the window is limited only by the imagination of the customer. The snow-white profile and wide range of colored films allows the customer to design a perfect window that meets the modern architectural trends.

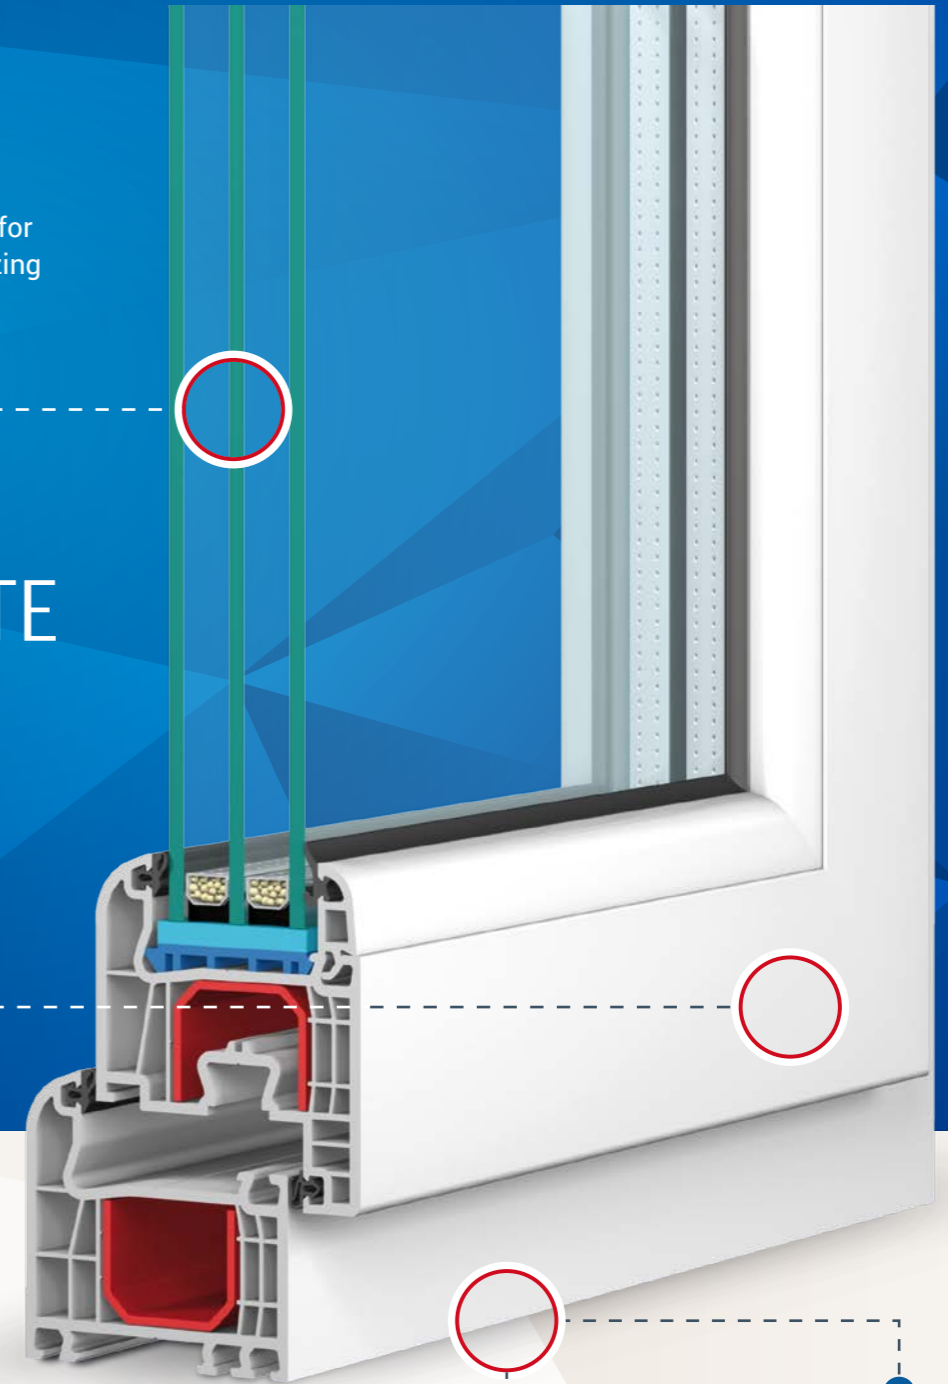

ENERGY LITE

Energy Efficiency

The five-chamber construction of the profiles and the expanded glass pocket allows for triple glazed IGUs and sound rated glazing options.

ENERGY LITE CLASSIC

Safety

Energy Lite windows are made with the highest quality uPVC profiles, that are extruded in-house and are 100% recyclable. The window profiles are fully steel reinforcement within the sashes and frames which provides strong backing for hardware attachment. The modern MACO fittings with anti-burglary pivots ensure superior security against forced entry.
