

Presenting
The Ultimate Tournament Bow
Black Widow
Model 1300

THE MODEL 1300 HANDLE

The patented* "A" frame design newly streamlined for a more pleasing appearance and a handle grip that your hand fits so naturally you will think it was custom made just for you. Installed ready for use is the Black Widow Plunger, the plunger with a "stainless steel" stem for longer life and smoother action and the new Black Widow "Arrow Flight Controls" (patent pending) that is now furnished as standard equipment with each handle.

* US patent No. D-227-098
(also foreign patents)

The model 1300 has been designed and specifically engineered to take into consideration the need for a universally functional bow for all styles of shooting, draw lengths and tournament conditions both outdoors and indoors.

Black Widow has always been a leader in limb performance with a combination of speed and stability acclaimed by top archers around the world.

LIMB OPTIONS: TOPS IN VERSATILITY

The model 1300 offers archers seven different limbs. Four lengths of regular target limbs, one special length hunting limb and two lengths of an entirely new design of limb for the tough, competitive demands for indoor shooting. These limbs are designed for super stability, and smoothness. Their wider string angle makes it easier to get a steady, smooth release with the lighter draw weights preferred by most archers for indoor shooting.

String height for T600 69" bow:

8 7/8" to 9 5/8"

String height is measured from the string to the deepest part of the handle grip.

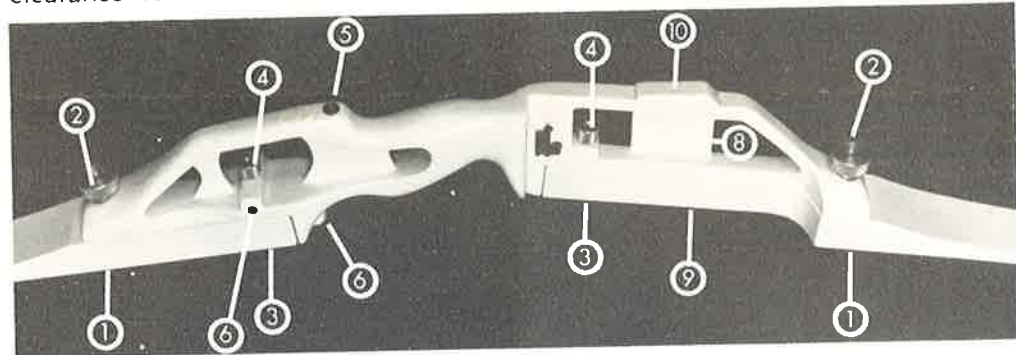

ASSEMBLY

Assembly is precise and easy to do. (No. 1) is the location of inserts installed permanently in the limbs. (No. 3) is location of special flat head bolts installed permanently in the limbs. When (No. 3) is inserted in the handle the round, knurled nuts, (No. 4), may be put on, however, do not tighten. Now, insert bolt (No. 2) and tighten with normal thumb and finger pressure while holding the handle section allowing the limb to self align. Then tighten (No. 4). All parts are precision made of solid brass and are epoxy treated to stop discoloration.

Each handle has a stabilizer insert with 5/16-24 threads (No. 5) and three built in counter balance mounts with 1/4-20 threads (No. 6).

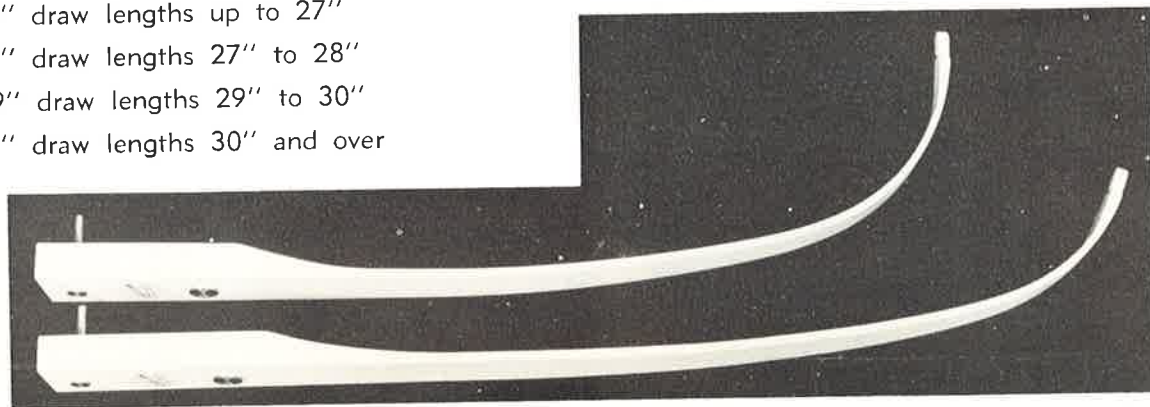

There are various locations for sight mountings including the very popular side mount plate (No. 8) or mount with wood screws in the limb section (No. 9) also the back bar (No. 10) may be used. When using this position to drill clearance for 6-32 bolts use a 9/64" drill. If tapping for a 6-32 bolt use a No. 36 drill.

LIMB RECOMMENDATIONS

- Regular Target Limbs
- 65" draw lengths up to 27"
- 67" draw lengths 27" to 28"
- 69" draw lengths 29" to 30"
