

2016 SCOPECOAT™

Scopecoat, a new beginning.

What started as a conversation with a long-time friend Mike Noell on the desire to start a business ended as a partnership to acquire a new company. After several months of discussion, in August 2015, a new chapter began when Dan Evans, founder of Scopecoat®, the world’s leader in optics protection, agreed to sell the brand he had started out of his garage to new ownership. Scopecoat, LLC was born.

Six short weeks later, while preparing to relocate our offices from Phoenix, Arizona, to Virginia Beach, Virginia, a second acquisition opportunity was presented. Slideboot, a protective neoprene cover for striker fire and 1911 style handguns, seen on page 19, was a logical fit and became part of the Scopecoat family in October 2015.

It is truly an exciting time, and momentum with the brand is growing thanks to our dealers and distributors. Here is what we have planned for Scopecoat in 2016:

Based on customer feedback, we have extended our line so you will see new products, new colors and new camo patterns. Through our development lab and acquisition team, we are committed to adding additional products and product categories throughout the year. Please check our website, or “Like” our social media pages to ensure you get updates in a timely manner. We will continue to increase our distribution points making it easier for you to find our USA Made Scopecoat products at your local dealer. If your favorite dealer does not offer Scopecoat products, have them give us a call. We would be glad to help establish their account.

Thank you for your confidence in the Scopecoat brand. Our team is committed to delivering the best possible protection for your optics and handguns. Wherever your mission takes you -- in the field, on the streets, or in foreign lands on deployment -- you can trust Scopecoat for the ultimate protection.

Sincerely,

Terry Naughton
President
Scopecoat®, LLC

THE ULTIMATE OPTIC PROTECTION

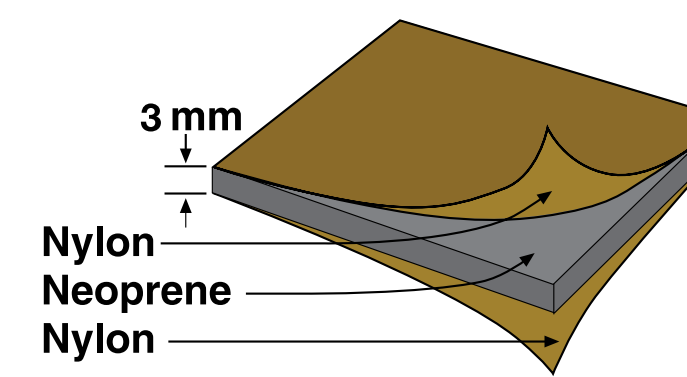

ABOUT SCOPECOAT®

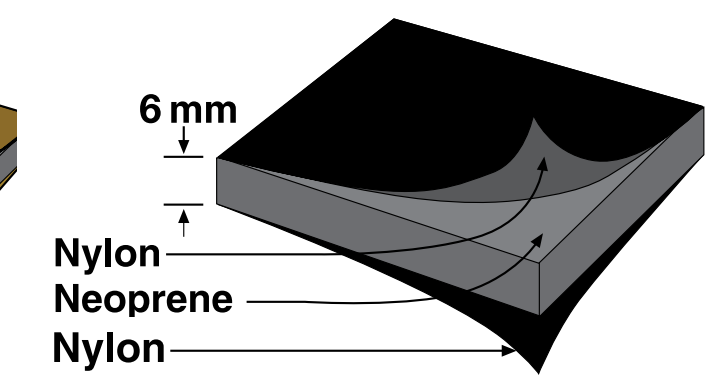

Our Patented Scopecoat® Binobib® and SlideBoot™ protective covers are constructed of the highest quality neoprene. We laminate nylon onto the neoprene to provide long life, colorfast color options and silent movement. Custom fit to your optic our simple design safeguards against dust, dirt, dings, and scratches. Shock and moisture absorbing neoprene draws moisture and condensation away from your optic, protecting your gear from the elements. Scopecoat® Binobib® and SlideBoot™ products provide a wide range of protection for recreational, sporting, tactical and more.

PRODUCT SPECIFICATIONS

Made in USA Scopecoat®, Binobib®, XP-6™ Flak Jacket, SlideBoots™, BarrelBoots™ and BoltBoots™ are constructed of the highest quality neoprene with nylon laminate. Neoprene a material commonly used in wetsuits, conforms to the shape upon which it is placed. Its superior composition assists in repelling moisture and condensation away from your scope. Nylon offers the resiliency of movement while repelling dirt and dust. This combination helps to protect your optics from the elements and from damage while storing or transporting your weapon.

SELECTING THE CORRECT SIZE

Scopecoat® protective covers fit a variety of optics. When choosing the right size Scopecoat® measure the overall length of your scope in inches and the objective lens in millimeters.

Scopecoat® stretches to custom fit to your optic while providing maximum protection. Our standard Scopecoat® cylindrical covers can stretch approximately 1 to 1.5 inches beyond the stated size. For example, a 10.5" cover may stretch from 11.5 inches to almost 12 inches. With this in mind, select the right size for either a relaxed or snug fit.

To determine what size Scopecoat® you will need for cylindrical type scopes, follow the steps below.

The images above will help to determine which Scopecoat® protective covers will best fit your scope.

MEASURING YOUR OPTIC

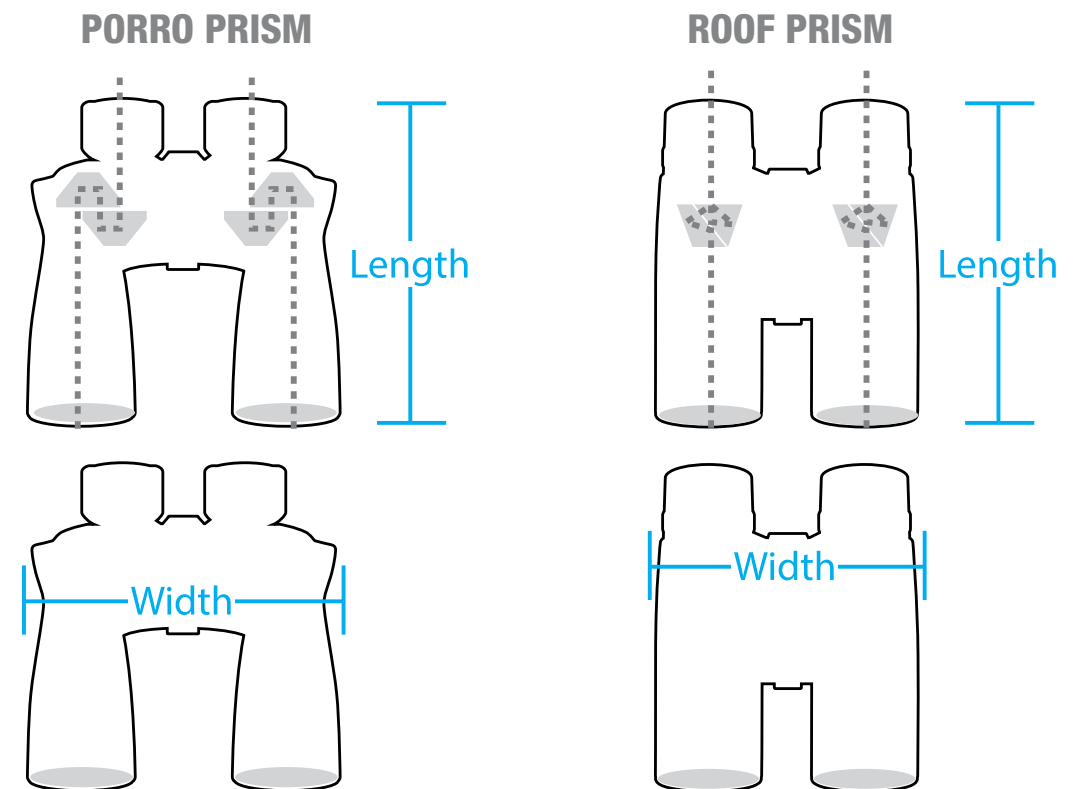

Optic sizes are listed by overall length and objective sizes. The length is measured in inches and the objective is measured in millimeters (mm).

1. Measure the overall length of the scope, including the size of the sunshade, if applicable.
2. Measure the objective lens in millimeters. The objective end of the scope is the end that you see out of, or the end furthest from your eye.
3. Measure the turrets, (These are the adjustment knobs in the center of the scope, i.e.: Windage, Elevation, and, or, Parallax knobs). We consider turrets that are .75 inches or more to be "Tall Turrets," for those models we suggest the XP-6™ Flak Jacket to maximize coverage.

- Standard Scopecoat® protective covers are designed to fit scopes with standard height turrets.
- XP-6™ Flak Jacket Scopecoat® protective covers are designed to fit scopes with tall or tactical turrets.
- Scopecoat® is available in 2 thicknesses: Standard Scopecoat® in 3mm, and our XP-6™ Flak Jacket in 6mm thicknesses.

MEASURING YOUR BINOCULARS

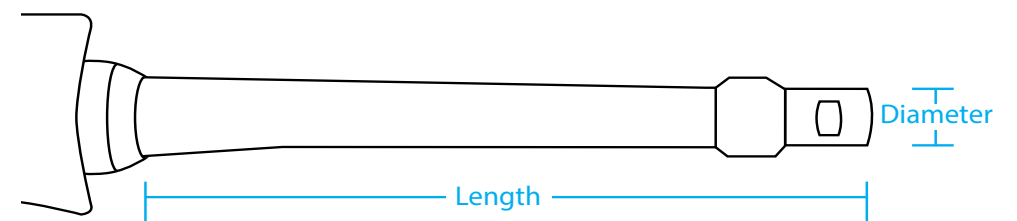

1. Type: Determine if your Binoculars are Porro Prism or Roof Prism design.
2. Length: Measure the distance from the ocular (eye piece) to the objective.
3. Width: Measure the distance across the closed hand-band (where you hold the binoculars).

MEASURING YOUR BARREL BOOT™

Measure the length and diameter of the barrel to determine the right cover for your barrel. Standard sizes are listed in the fit chart on page 21. For questions or more details go to Scopecoat.com, or send us an email at info@scopecoat.com.

Barrel Shown Below

STANDARD SCOPECOAT®

Designed to fit scopes with standard or “low” turrets, this slim fit cover is perfect for the field. Scopecoat® safeguards your optics from dust, dirt, dings, scratches, and moisture with our high quality neoprene/nylon laminate.

CUSTOM LOGO SHOP

SWAT, Police, Sheriff, FBI, DEA, and many other Law Enforcement agencies choose to place their agency's logo on our Scopecoat™ protective covers. We offer custom screening on most covers. Get your unit's gear emboldened with your agency's sanctioned logo, (i.e.: SWAT, POLICE, SHERIFF, etc.)

PRIVATE LABELING

Promote your company, organization, club, foundation, lodge or retail location. Our high quality screen printing is available in one or two color. Let us team up with your marketing group to get started. Call us: 877-726-7328, or email us: info@scopecoat.com

Many of the world's leading Sporting, Combat, Law Enforcement & Tactical scope manufacturers recommend or offer Scopecoat™ on select models.

SCOPECOAT® CARE & MAINTENANCE

This neoprene product is not designed to be completely WATERPROOF; but is extremely water resistant. Your Scopecoat® BREATHES. Scopecoat® actually draws moisture and condensation away from your scope. You may temporarily waterproof your Scopecoat by using any commercial spray-on water repellant, following the manufacturer's instructions. If your scope is going to be exposed to extreme weather conditions such as rain, wet snow, etc., spray your Scopecoat® exterior generously with water repellant. Allow the Scopecoat® to dry completely before placing on your optic. After use, if excessive soil is present machine wash in warm water with a mild detergent. Do not use Bleach or fabric softener, as the softener may leave a residue that can transfer to your lenses. Turn the Scopecoat inside-out and air dry for approximately 12 hours. Do not place in the dryer! Be careful not to fold or bend your Scopecoat. Creasing may cause indentations or a permanent break in the neoprene. If this happens, the damage may sometimes be resolved by washing the Scopecoat®.

SCOPECOAT™

We want to thank all of our customers, dealers, distributors, reps, sporting goods catalog companies, and scope manufacturers for making Scopecoat® the world's most trusted name in optic protection.
