

## GAS & STEAM COMBO WASHER EXTRACTORS

Yamamoto brings you another Break-through in Laundry Technology that Saves you Money on Laundry Production!

These Washer Extractors are also Dryers – **All in One Same Foot Print!**

**Either Gas Dry or Steam Dry.**

With all the same Benefits as the Washer Extractor.

The best part of a COMBO is that you don't have to have people standing around waiting for the washer to finish and then transfer the linens into the Dryer. *(This practice is very costly and a waste of money as this staff could be doing something else)*

With the COMBO machine, when it is finished it is also DRY!

When you are washing a Load, you can finish off the last two steps at a higher Temperature (Say 125 Degrees F.) This way the Textiles are Warmer, the water is Thinner and when you Extract you will be 'Pulling Out' more water!

Now, when the Load Has Finished Extraction the COMBO then goes into DRYING MODE. When you start DRYING at 125 Degrees F you reduce the Drying Time Significantly!

IMPROVING PRODUCTION TIME
