JDP Announces Notice of Allowance for Two New Patents Covering JDP-205 and JDP-207

BLUE BELL, PENNSYLVANIA, July 20, 2015 – JDP Therapeutics Inc., a privately held late stage specialty pharmaceutical company, today announced that the United States Patent and Trademark Office (USPTO) has allowed two new patents that cover JDP’s lead products JDP-205, JDP-207, and other related products, further expanding the intellectual property portfolio for the company’s lead assets, which are currently in Phase III clinical trials. These are the 5th and 6th Patents for the company for its JDP-205, JDP-207 and its related products. These Notices of Allowance are for JDP’s Patent Application Serial Number 13/940,747 and 13/644,290 titled "Non-sedating Antihistamine Injection Formulations and Methods of Use thereof". The allowed patents claim new methods of use of JDP’s lead product JDP-205 and JDP-207 for the treatment of acute allergic reactions. These newly allowed patents will protect JDP-205 and JDP-207, with their patent coverage term, through year 2030. With the FDA’s review extension, the patent term may be extended beyond 2031 or further.

"The grant of these two new patents are great milestones for us", stated Dr. Jie Du, Chief Executive Officer of JDP, "These two new patents are part of the company’s expanding IP portfolio covering JDP-205, JDP-207 and other related products. The company is currently prosecuting 3 additional pending U.S. and international patent applications to protect the commercial potential of JDP-205, JDP-207 and related products to year 2030 and beyond."

About JDP-205

JDP-205 is a proprietary injectable product being developed for the treatment of acute allergic reactions for the hospital market. A market QUANT study surveyed 110 physicians, and revealed that 86% of responding doctors had indicated readiness to use JDP-205 in place of the current therapy when the product is approved by the FDA. A second independent market research study with in-depth clinician interviews confirmed the findings.

Acute allergic reaction is a serious condition, potentially life-threatening, and has been growing at concerning rates with very limited selections of medications for treatment. JDP-205 will offer an alternative and superior treatment to the current therapy for the first time in nearly 60

years. JDP-205 is projected to have a significant commercial opportunity with its peak annual sales in the range of ~\$300MM.

About JDP Therapeutics Inc.

JDP Therapeutics Inc. is a privately held, clinical phase III stage specialty pharmaceutical company focused on developing small molecule therapeutics to treat life threatening diseases with significant unmet medical needs, primarily for use of acute care in the hospital setting.

JDP Therapeutics pursues unfulfilled opportunities in existing molecules from which it develops unique dosage forms, novel formulations, and new indications to achieve full therapeutic and market potential. This approach mitigates risk, shortens the development cycle, leads to a well-defined regulatory pathway, and fully characterizes clinical needs for each product opportunity.
