

STRENGTHEN THE FAMILY FOR SUSTAINABLE DEVELOPMENT

1. Introduction

Vox's proposal to develop a policy to support the family is based on consideration of the enormity of the problems currently facing the Spanish society. The reasons for addressing social reform in depth are varied, but may not be today doubts about its necessity.

For this reason, Vox has developed a recovery program values articulated around four main themes: family, life, birth and education. All share the principle of defending freedom and life, and represent a firm commitment in favor of a future for the Spanish society based on the values for Vox non-negotiable values, Christian and Western court.

To this end, we wanted to make a public commitment signed before a notary, and in the presence of major players in the Spanish civil society, a document which we called "Contract Values", in which we affirm our willingness to serve above all the commitment.

2. Proposal

Non-marketable securities are based Vox in defending the first right, which is the book of life from conception to natural death. The ultimate goal of our proposal in this regard is zero abortion through a substitution of the culture of death for life. We propose a plan information, help and alternatives to the woman who does everything abortion unfeasible. The authorities will not remain indifferent to the adverse circumstances for pregnant women, but actively support, providing this alternative to ensure the exercise of motherhood.

The defense of educational freedom is essential in our project. We believe that parents should have the ability to decide what kind of education they want for their children according to their beliefs, so they have presented some entirely new initiatives for Spanish political force, as in the case of school vouchers, which must allow greater freedom to families. At the same time, we intend to also safeguard the system of charter schools and protect the right to a differentiated education, as well academically as effective and throws it in the integral formation of the person.

We propose a recovery of lost dignity of the teacher and the teacher and the renewal of the educational process as a whole through effort, merit and sacrifice as basic teachings of this process. Urge, likewise, recovering a full training that is not postponed the study of the humanities. In the Spanish case, further urges the rehabilitation of the university, now completely discredited, with very serious problems of politicization and inbreeding; and recovery of educational skills at the hands of the central state.

But the most peremptory challenge has raised the Spanish society in the medium term is its survival. Each year the demographic balance shows a counter balance of 250,000 births. And a society without children is a society without future. Spain is at the bottom in the global birth rate. Nothing so urgent, then.

For all these reasons, we advocate the creation of a Ministry of Family and a National Plan of Birth, a return to previous legislation on divorce, with the necessary corrections when minor children are affected, and the promotion of population growth by incentive determined fiscal policy helps families. To do this, we will implement the universalization of fiscal aid, without limitation,

It is also urgent, convergence with the European average of family benefits, and the expansion of child allowances as circumstances justifying studies or unemployment.

A particularly noteworthy as is the adequacy of the rates on water and electricity to the reality of the family, establishing tariff escalation. We also anticipate making work family, whereas spouses without paid work also gain access to a public pension. They are treated as pensions.

It is noteworthy that we request the extension of political rights of minors and their recognition as equal to those of adults. Today supervised by parents or legal guardians, who are assumed liabilities arising from his minority, have become the custodians of such political rights as people in charge are still minors; therefore, the expression of which has

equally borne by them. Thus, we propose that parents have a right to vote provided to the children of those who are responsible.

People who have taken upon themselves the responsibility of bearing a large family will enjoy all the benefits that the public authorities may dispensarles. We ask for them a social contract preference.

Children must be specially protected, especially from the aggressions of the public media. Furthermore, no other union shall be treated in the family, which must be preserved for family unions consider alternatives inflacionan the term and empty of real content.

We advocate joint custody in divorces with children, system in force in most European countries, and we call for urgent measures to help reconcile family life and work life, together with the recognition of the work of full-time mothers through the provision of pensions to dignify their work, pensions which amount shall be increased by the number of children.
