

Heath DX-100, DX-100B, and VF-1 Replacement Dial and Fiducial

The manufacturing process for these replacement frequency calibration dials for the Heath DX-100 and DX-100B transmitters and VF-1 VFOs, has been changed. The new process results in a thinner dial (very similar to the original dial) and a more "crisp" rendition of the lettering. However, they still can be supplied with an aluminum reinforcement ring that helps prevent long-term damage from the friction drive on the VFO knob.

Price for each dial (less reinforcement ring) is \$29.95 except for those residing in the State of Texas wherein 8.25% sales tax has to be added making the price \$32.42. The reinforcement ring is \$10.00 each or \$10.82 for those in Texas. Total price for dial and reinforcement ring is \$39.95 except for the State of Texas which is \$43.24. The prices plus shipping.

Replacement fiducials (the green plastic sheet with the "slit" for reading the frequency) are also available. The plastic used in this fiducial is slightly thinner than the original. However, they are also more flexible and therefore are not anywhere near as fragile as the original, often broken, fiducials.

Price for each fiducial is \$10.00 except for the State of Texas in which the price is \$10.82.

Special pricing for the "plain" dial plus the fiducial: \$36.95 except for Texas wherein the price is \$40.00. The price for the dial with the reinforcement ring plus the fiducial is \$45.00 except for Texas wherein the price is \$48.71.

Shipping for dial, fiducial, or both:

United States and possessions: \$2.00

Canada: \$4.00
