

CARE MANAGEMENT

What is Care Management & how can it benefit you and your family?

Care Management

Care Management is available to all patients at no cost. Our care managers are Mary Douglas PA-C and Katelyn Mock, R.D. They are part of our medical team that work with your doctor and your family to help you achieve your health goals.

Dietician Services

Katelyn is a Registered Dietician and can help you make food choices that will optimize your health and prevent disease. We apply nutrition principles to health promotion and the prevention of diet-related disease conditions such as diabetes, heart disease, obesity and many more.

Services

Care Management and Dietician visits are done in our office and/or by phone calls. We answer questions about your health, medications and diet. We enhance communication with your physician and make referrals to other resources in the community for additional support for you and your family. We offer support and tools to address behavioral needs. We care about you and want to provide support so that you can lead a happy healthy life.

How do you receive Care Management

Ask your doctor if you would benefit from Care Management!
