

MODEL 7170 JOG LEVER

This Jog Lever is used in power hydraulic steering systems. The operator can maneuver the boat by simply jogging the lever for port or starboard movement. The unit is operated by two internal micro switches. Its watertight construction in bronze and stainless steel will ensure years of trouble-free operation. The jog lever will override the steering wheel; however it will not cause any interference should the power hydraulics fail.

Various finishes are available and the unit can be ordered with the cable running straight out or downwards. The cable configuration can easily be changed in the field.

Weight: 2.1 lb. (0.95 kg)

Material: Die cast silicon bronze and stainless steel hardware.

ORDERING INFORMATION

- A - Black epoxy base with chrome hub
 - B - All black epoxy
 - C - All chrome
 - D - All polished bronze
-
- 1 - Cable lead straight out
 - 2 - Cable lead down
