

Let's Get Ready for the Journey

General
Data

Protection
Regulation

Individual Rights

Individuals have the right to know how their data is being processed, object to processing or ask for rectification.

Under certain circumstances, EU residents have the right to be forgotten, so all data stored by the company must be erased.

Data Protection

Organizations need to protect and keep track of personal data. Processing can be done with appropriate consent and under legal grounds.

Any data breach must be reported in 72 hours to authorities and compromised individuals.

Personal Privacy

Organizations are required to have transparent policies of data collection and clearly outline processing purpose.

Privacy impact assessments are required to be conducted with highly invasive data processing.

PERSONAL DATA

Political Preference

Cookie Identifier

Sexual orientation

The European Union's General Data Protection Regulation takes effect on May 25, 2018 imposing new rules for handling personal data of EU residents.

Data Inventory

We start the GDPR compliance by mapping all your business processes with data and building the architecture of your data inventory.

Data Protection

Once identified, we adjust procedures and policies related to data usage by humans or systems. With the proper data governance rules in place, we implement technical security measures to protect data against attacks or unintentional damage.

Data Handling

Report & Monitor

We continuously keep track of proper data handling through implementing report and monitoring controls to identify on the spot misuse or data breach.

It's not only about the fines

While growing your business, build a **reputation** your customers can **trust**.

Respect their **rights** so they can hear your values. Stay safe and be fair.

But don't stop and stay ahead of the game by **maximizing** the **value of data**.

SERVICES

Employee Awareness

Get the right mindset inside your company towards security and data privacy.

Our customized training sessions are uniquely design to mimic business as usual activities and enforce accountability.

We use real case scenarios and ethical hackers to showcase and raise awareness regarding security threats.

Data Protection Officer as a Service

GDPR requires companies to appoint data protection officers.

We bring a good mixture between legal, technical and business expertise to fully support your company in implementing your compliance program.

This service includes Privacy Impact Assessment support.

GDPR Assessment

A one time service carried out throughout your company to assess your current GDPR compliance maturity and find critical legacy risks.

We will establish a remediation plan, by recommending the appropriate technical & legal measures to stay compliant and still make the most out of data.

Security as a Service

Have your own 24x7 security team ready to support with data protection, reporting and monitoring.

In addition, engage us in ethical hacking activities, social engineering campaigns or penetration testing.

CHIRIC | CHIRIC

Data Protection Team

We've joined forces to put the right set of skills in place. GDPR compliance is a complex process that spans from legal matters to software design, information security, data mining algorithms and much more.
