

Butcher's Swimming Pools

NEW INFORMATION AND THE SEASONAL ISSUES

We provide Replasters and Remodels

Project: Replaster or remodel a pool and update the surrounding landscaping.

If you've got a swimming pool that's 20, 30 or even 40 years old, chances are it might be due for an update. Many of these pools were built of gunite, a mixture of cement, sand and water that was sprayed over a web of reinforcing metal bars, then topped with plaster. The water line was typically lined with tile and topped with coping. Concrete, stone or occasionally wood usually forms the decking that surrounds the pool.

Why: The expected life span of the plaster applied to gunite pools ranges from 10 to 15 years — although good pool chemistry and maintenance may earn you a few years beyond that. When left white, the plaster allows the sky to reflect in the water, giving the water that aqua blue hue that many fondly associate with backyard swimming pools. You can refinish your pool with plaster again, but other choices are available now — and you might want to update the rest of the yard while you're at it.

We recently replastered Houston Country Club's Swimming Pool!!

Before

After

REMINDER: Leaf season has started. It is IMPERATIVE to empty poolside and pump baskets daily to prevent any damage to your equipment and/or circulation of the water.
