

Boston Valley Terra Cotta

Recreating the Past - Shaping the Future

Provider #K186

Course #BVTC-05

“The Changing Shape of TerraCotta”

This course will educate the participant on the development of terra cotta construction in the United States and how terra cotta has been brought into modern day design practices primarily through its use as a cladding material. Participants will come to understand the various terra cotta manufacturing methods and how they impact installation means and methods. The course will demonstrate why terra cotta is a sustainable and durable material that can be used in various construction practices as well as climates. Finally, participants will explore how digital technology is changing terra cotta design and production.
