

Make a Business

Find a product to sell. Find three competitors and find out how much they are selling it for. Then find out how much it costs for you to make this product. Then find out how much it will cost to have a place to put your business. Then figure out how much you will have to pay for people to work there, how many people you will need to work there. Then find out how much stuff you have to sell in order to make money on this operation.

Gross revenue=price*how many you sold

Gross profit=sales price-cost to make it

Net profit=gross profit*number sold-total costs to run your business

You will put all of this together in a google slide and convince me, the bank, to invest in your new and amazing and wildly profitable business venture.
