

Southwest Spectro-Chem Labs

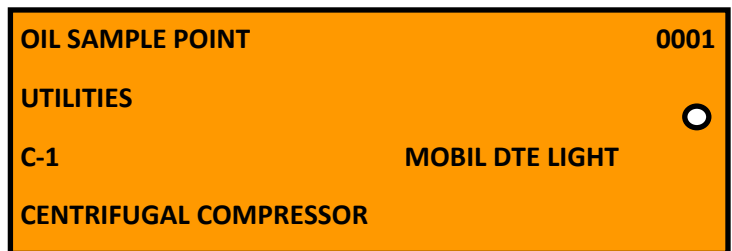

IN PLANT LUBE OIL SAMPLING

A key first step to valuable oil analysis data, is how the sample is taken. Improper sampling technique can lead to false data being used to determine a course of action. Our well trained technicians have the experience and know-how, to get the job done.

BENEFITS

- Samples are pulled on a monthly or quarterly scheduled routine basis
- Includes a complimentary plant survey to identify the optimal sample point location
- Ensures the sample is drawn from the same location, the same way, each time
- Our sampling procedure ensures a good, quality representative sample of your equipment
- Samples are returned to the lab the same day or next day (no need to ship samples out)
- Over 100 years + of in plant, in-service lube oil sampling
- Currently provide this service at major chemical and refinery sites

** An example of our sample point tag that is attached to the sample point location for easy identification*
