

## UV PSA Products

- ❖ They can be applied by rotogravure or lithographic rollers; screen print; valve and needle dispense; piezo spray or by hand.
  
- ❖ Then rapidly cured by Ultra-Violet (UV) and Visible light from mercury based bulbs or LED systems.
  
- ❖ The cured PSA products cover a range of tackiness, peel values, tensile shear and static shear strengths to cover many customer applications.
  
- ❖ Used to replace tapes and PSA films for labor and cost savings.
