

Addendum to RFP # STAR013120

- Q1. The existing lot has concrete curbing; will this project require the extension of that curbing? If not I'm sure it will have to have concrete parking bumpers
- A1. Please provide a price with and without concrete curbing. Concrete Curb & Gutter is not a requirement for this RFP, but if proposed separately would require an approximate amount of 265 linear feet. Parking bumpers are not required in this RFP.
- Q2. There is no scale plans attached, so how will this parking area be built? For example how many inches of stone, inches of asphalt?
- A2. The south parking area will be a total area of approximately 5,100 square feet. The north parking area will be approximately 2,600 square feet.
- Q3. There is no parking layout and I was told that there will be lines painted for parking? Will need to know how many spaces etc.
- A3. Line painting is not required for this RFP.
- Q4. This quote is also asking for the power and concrete pillar for light poles, How many?
- A4. 2 light poles are required in this RFP. Location is in drawing attached and identified with yellow pins.
- Q5. It states contractor shall invoice within 30 days of completion, to clarify how long after invoicing shall the contractor be paid? This is a fairly big project so I need to know all the facts as its normally our policy on jobs this size to get deposits for materials, but we understand that the government doesn't always work that way.
- A5. Contractor, following satisfactory completion of the project and submittal of invoice shall be paid within 30 days of receipt of invoice.
