

THE CORE CATCHER

It's a drop in the bucket

This ring is designed to transform any standard five gallon bucket into a core catcher and will catch up to 8" cores!

It slides onto the bucket and gets mounted to the ceiling below where you plan to core.

It's ideal for hospitals, pharmaceutical, or any occupied area where the danger of coring will damage any personal property or expensive equipment.

It is much safer than trying to catch a core above your head on top of a ladder.

You no longer need anyone below to catch your cores.

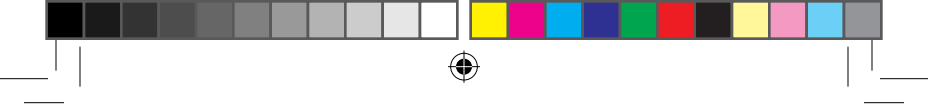

The holes are slotted for ease of installation and removal.
