Plot Avg: 244

Planting Date: 5/1/19 Population: 34000
Harvest Date: 10/10/19 Previous Crop: Soybeans

With an above average year in yield this years plots reflect the same trend. DKC55-85 continued its impressive yield this year by being 28 bushels over the plot average. Mycogen 2098AM proved to be impressive in the plot as well as side by side trials. Overall impressive showing in the early season corn which seemed to be right on par with the later maturities this year.

This year we changed the way we do our test plots. They are done by a third party in a replicated block trial. Each hybrid is planted in multiple blocks then combined to get an average. This gives us more accurate data than one strip through a field. We have also included 2 and 3 year averages for hybrids that have been in the plot multiple years.
