

## Comments from Maxim Power Corp

I was looking through Exhibit 7 and noticed that our Pawtucket Power generator is listed in Table E7-3 "ISO-NE Generators Without Mainline Rights or Dual-Fuel Capability". Pawtucket Power is dual fuel capable with the primary fuel being natural gas and the secondary fuel being Distillate Fuel Oil. Not sure who supplied that information but wanted to let you know so it could be corrected.

Our other generators, Altresco and CDECCA, are both listed correctly in Table E7-2; Pawtucket Power should be added to that table.
