DOCTOR OF OPTOMETRY

---

## *Eye Wellness* Examination digital retinal photography

A highly sophisticated, computerized camera enables us to provide a more thorough analysis of your eyes. Retinal Photography can assist the doctor in documentation of retinal problems, optic nerve disease, precancerous lesions, macular degeneration, hypertensive retinopathy, diabetic retinopathy, etc.

Photo-documentation is painless since nothing will touch your eye. The specialized digital picture can be an excellent reference point to make future comparisons.

We encourage all of our patients to have retinal photographs taken. While eyes typically do not need to be dilated to perform this procedure, it is not used as a replacement for dilation part of your exam, but rather to complement it, and allow a more thorough evaluation of your eye health.

Your vision discount plan may allow this procedure at an additional cost to complement a routine vision exam. We offer it for a reduced fee of \$49 to all our patients including those without a vision plan.

If you DO NOT wish to have the Eye wellness examination please check the box.

While retinal photography for documentation purposes represents preventative health care for some, for others, retinal photography is required to monitor or rule out certain eye disease. In this latter case, when eye disease is present, the fee for retinal photography may be reimbursable from your medical insurance company. All photography payments are eligible for *Flex spending*.
