

Health Professionals To Be: We Want YOU!

This two-part Health Careers program is designed to attract high academic performing juniors in high school, with *serious* interests in pursuing the medical fields that require **graduate level** education paths.

Part one of the program will help solidify students' career choices to pursue graduate level medical professions with a visit to the University of Toledo's Health Science Campus. While there, students may receive a guided tour of the UT-Interprofessional Immersive Simulation Center (IISC) & the Frederic & Mary Wolfe Center Building for information about Pharmacy career path options. They will meet with current UT medical students; tour the Health Science Center's Gross Anatomy Lab & Plastination Museum. By the end of the day, students should have an answer to the question: Do I really desire to pursue a medical career at the graduate degree level?

Part two of the program aims to help students clarify their medical career choices. Students take a day trip to a medical center for **STEM**-related public health and medical problem-solving activities, offered by the partnering institutions. Then, they **meet with** some of their **career specific** professionals for Q & A sessions. This is made possible by the efforts of medical education centers' facilities and staff and SAHEC's Advisory Council and Corporate Board members. Your school will attend one of these sites: Terra State Community College (February 3, 2017), Fisher Titus Medical Center (February 16, 2017) or Firelands School of Nursing (February 2, 2017). At the end of the program, contact information will be given to the students for their *own* arrangement of follow-up job shadows with the medical centers.

Say **YES** and join the program! Please tell your high school counselor today.
