Un-capping Tub - Deluxe

Deluxe Plastic construction. Perfect for the small beekeeper. For use to uncap frames. The bar holds frames so you can uncap them and the grid drains the cappings of honey into the bottom tank. The grid can also be used for draining out comb honey. The bottom tank has a 1 1/2" plastic honey gate. Save a mess and the trouble of extracting for the small producer.

Deluxe uncapping system that consists of 2 tubs that nest inside one another. With the capacity to hold 70-80 lbs. of uncapped honey, the tub is equipped with a steel grate and a honey gate for bottling.

Strainer Cloth sold separately: This cloth is washable and reusable. * **Do not wash with soap or detergent.**

****Please Do NOT rest** the cutting tools inside the un-capping tub as this will tear and cut into the straining material, shortening it's useful life-span.
