

Kitten Vaccines

If your kitten is a stray or has been around unvaccinated cats, we recommend testing them for FIV/FelV before starting a vaccine regimen. Then, we vaccinate according to the following schedule;

8 weeks: FVRCP

12 weeks: FVRCP

FeLV if kitten will be outdoors or lives with multiple cats

16 weeks: FVRCP

Rabies

+/- FeLV

When can I get my kitten spayed or neutered? Kittens can be spayed/neutered any time after 4 months of age. We recommend spaying/neutering sometime between 4-6 months of age to help prevent unwanted behavior such as marking or wandering.
