

Spreading Perennial Ryegrass Blend

Benefits :

- ✓ Great turf density
- ✓ Widespread adaptation
- ✓ Handles close mowing
- ✓ Dark green color
- ✓ Fine leaf texture

Seeding Rates:

Overseeding – 2-3 lbs per 1,000 sq ft

New seeding – 3-5 lbs per 1,000 sq ft

Lower seeding rate than regular perennial ryegrass since **Natural Knit™** is Pseudo-Stoloniferous = it has recuperative power and will fill in on its own.

Natural Knit® produces a very fine, tight sod with up to double the turf density of other commercially available perennial ryegrass varieties. **Natural Knit®** varieties Mensa and Savant can be used in any region that currently uses perennial ryegrasses for permanent turf applications. **Natural Knit®** is well suited for use on athletic fields and golf courses, home lawns, commercial landscapes and areas where an extremely durable perennial ryegrass is desired. Under fairway height mowing these new varieties increase in density without thatch build up. In addition, these varieties can be grown for sod.

Natural Knit® has strong spreading characteristics that help crowd out and control weeds. **Natural Knit®** is Poa Free and meets the Columbia Professional Quality Tag standards.

No weed control was used. The turf was allowed to fill back in on its own.
