

Continuing Education/Continuing Medical Education (CE/CME) Activity

Clinician Well-Being & Engagement

WHEN: 1:30-2:30 p.m. (Central Standard Time) • Tuesday, November 12, 2019

SPEAKERS: Baligh R. Yehia, M.D., MPP, MSc

Ascension Medical Group (AMG)

Disclosures: Dr. Yehia and Dr. Stanley have no relevant financial relationships with ACCME-defined commercial interests and will not be discussing any off-label or investigational use of products. All Ascension planners and reviewers have no relevant financial relationships with ACCME-defined commercial interests.

To join the meeting:

ONLINE: Livestreamed: www.stvhscme.com

OR IN PERSON: St. Vincent's East

Birmingham, AL • Room 1 & 2

For more information call (205) 838-3225

Presentation purpose:

A more engaged, satisfied workforce will provide better, safer, more compassionate care to patients, which will, in turn, reduce the total costs of care. Physician well being and engagement directly relates to patient outcomes and experiences.

Learning objectives:

Upon completion of this activity participants should be able to:

- Explain the business case to prioritizing engagement and clinician well-being
- Define three domains to create the institutional architecture that supports clinician well-being
- List ways to measure wellness in clinical practice
- Describe organizational strategies clinicians and leaders can use to implement culture of wellness, practice efficiency, and personal resilience

Target audience:

 This activity is designed for the interdisciplinary audience including physicians, nursing, pharmacy, PA & Social Workers

Credit Designation:

In support of improving patient care, Ascension/ St. Vincent's Health is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

This activity was planned by and for the healthcare team, and learners will receive 1.0 IPCE credits for learning and change.

Faculty/Course Director/Planners:

Ascension/St. Vincent's Health has selected all faculty participating in this activity. It is the policy of Ascension/St. Vincent's Health that all CE/CME planning committees, faculty, authors, editors, and staff disclose relationships with commercial interests upon nomination or invitation of participation. Disclosure documents are reviewed for potential conflicts of interest and if relevant, they are resolved prior to confirmation of participation. Only those participants who have no conflict of interest or who agreed to an identified resolution process prior to their participation were involved in this activity.

Conflict of Interest: In accordance with the ACCME Standards for Commercial Support, it is the policy of Ascension/St. Vincent's Health to ensure balance, independence, objectivity and scientific rigor in all CE/CME activities. Full disclosure of conflicts and conflict resolution will be made in writing via handout materials or syllabus.

Commercial Interest: No commercial interest was received for this CE/CME activity.

Ascension Medical Group (AMG)

Dr. Baligh Yehia is a physician executive experienced in architecting and leading change in complex health systems and markets. He has led enterprise-wide efforts to enhance clinical integration and deployed population health strategies to improve patient outcomes, experiences, and reduce costs. A nationally recognized expert in HIV medicine and health disparities, Dr. Yehia emphasizes human-centered design and the patient experience as part of each initiative. His commitment to excellence, collaborative nature, and ability to consistently deliver high-quality results has enabled him to work effectively as part of diverse leadership teams. For his innovative approaches to healthcare transformation, Dr. Yehia received the Chase Award for Executive Excellence, American College of Physicians McDonald Award for Outstanding Achievement, and was named by both Becker's Healthcare and Modern Healthcare as a top leader under 40 years old.

Education:

College & Residency

University of Florida, Gainesville, FL – Bachelor of Science (BS) with Hor	of Science (BS) with Honors		
	1999 – 2003		
University of Florida, Gainesville, FL – Medical Doctor (MD) with Honors	2002 – 2006

Moving from the Triple to the Quadruple Aim

The Clinician Well-Being and Engagement webinar will include the following learning objectives:

Understand the impact of clinician burnout on clinicians, their families, patients, and organizations.

Understand the Three Domains for Physician Well-being

- Culture of wellness
- Efficacy of practice Personal resilience.

Describe Best Practices for providers, clinics, and health care organizations to impact clinician well-being and engagement.

Define measurement and tracking tools to measure clinician well-being and engagement.

Moving from the Triple to the Quadruple Aim

Clinicians and staff well-being is a prerequisite for the triple aim.

Dissatisfied physicians and nurses are associated with lower patient satisfaction, may contribute to overuse of resources and thereby increase cost of care, and reduced adherence to treatment plans resulting in negatively affected clinical outcomes.

> — Thomas Bodenheimer, MD Christine Sinsky, MD

In order to take good care of patients, we have to take good care of those caring for patients.

Bodenheimer, T., Sinsky, C. From Triple to Quadruple Aim: Care of the Patient Requires Care of the Provider. Ann Fam Med 2014, 12:573-576.

The Rise of Clinician Burnout

Over the last decade burnout has increased among American physicians.

Burnout

A syndrome characterized by exhaustion, cynicism and reduced effectiveness

50.5% of physicians are at a high or moderate risk of burnout

68% of family physicians and 73% of general internists would not choose the same specialty 87% of physicians named the leading cause of work-related stress and burnout as paperwork and administration

Dissatisfied physicians are 2 to 3 times more likely to leave practice

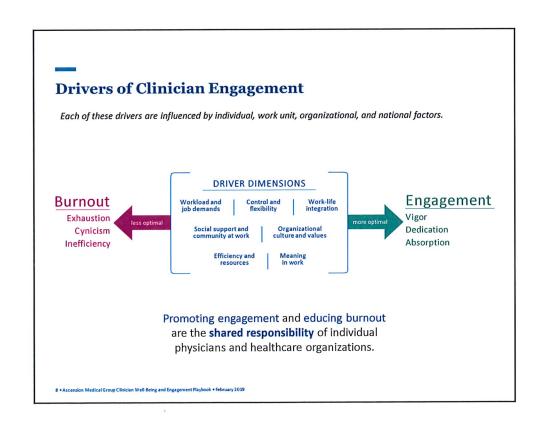

Bodenheimer, T., Sinsky, C. From Triple to Quadruple Aim: Care of the Patient Requires Care of the Provider. Ann Fam Med 2014, 12:573-576.

Clinician Well-Being and Engagement Best Practices

Personal Resilience Individual skills, behaviors, and attitudes that contribute to physical, emotional and professional well-being.

in the 2015 Stanford Model

Offer mindfulness training and resources

Offer stress management training and services

Think about practices from a different perspective

Offer community-building opportunities

Offer assessment for resiliency

Launch a diverse clinician well-being committee

Description:

An organizational commitment to establish a Clinician Well-Being Committee typically begins with recognition of the physician and advance practice provider as a valued partner by the executive leadership team. The role of the committee is to review the current state of clinician engagement and well-being and implement practices to build a robust clinician community, improve practice efficiency and strengthen personal resilience.

Implementation:

- Launch a committee with diverse membership, drawing from different health professions, specialties and programs.
- Provide administrative and financial support for committee activities.
- Create subcommittees such as social, community service, diversity and inclusion, physical well-being, and family support.

Critical Success Factors:

- Diversity in the committee: representation from physicians (both leader and non-leader), advanced practice providers, residents and fellows, and directors with expertise in operations, electronic health records, quality and wellness.
- Regular meetings (monthly) with standing agenda items: current state of clinician community (recent survey, engagement in myVoice, etc.), electronic health record optimization, learning opportunities for clinicians, networking/social opportunities, and
- other activities.

 Monitor clinician well-being at an organizational level with report outs to C-suite.
- Consider clinician well-being in critical decision-making at the organizational level.

Develop improved clinician-toclinician communication and connection strategies

Investment:

Description

Improving the ease of communication between clinicians and between clinicians and other members of the care team is essential for building community and delivering high-quality patient care. Communication and connection platforms/strategies are also important to fostering collaboration and innovation with organizations.

Implementation:

- Create physician-specific Yammer (or similar) groups.
- Adopt ministry-wide text paging/communication strategies (e.g., cell phone distribution, text messaging, group HIPAA-compliant chat capabilities, virtual pagers).
- Host social events, Grand Rounds, service programs and other gatherings to support community, collaboration and innovation.
- Design shared clinician work and renewal spaces (e.g., physician lounges).

Critical Success Factors:

- Organizational and leadership support.
- Technology capabilities.
- Training on collaborative communication platforms.

Resources:

Implement a daily huddle

A practice team that cares for complex patients must communicate and coordinate patient care needs among its members on a regular basis to achieve the best possible

Implementation of brief (15-minute), in-person scheduled meetings once or twice a day with relevant team members helps ensure an efficient clinic day with fewer surprises by providing an opportunity to anticipate patient needs and prepare for changes in staffing and logistics so that the day runs more smoothly.

The beauty of huddles is that they are short, yet effective. A strong commitment to starting and ending on time will make them a success. Many practices find that the time investment is more than made up for by improved clinic operations. However, it is important to establish a consistent time that integrates well into the clinic workflow.

- Develop relationships and designate roles.
- Designate a Huddle leader.
- Use a checklist or a template.
- Develop a strong culture that embraces and supports the routine of holding a huddle.
- . Add practice announcements and other non-patient related information that can easily and quickly be communicated to the team.

30 • Ascension Medical Group Clinician Well-Being and Engagement Playbook • February 2019

Critical Success Factors:

- Consistent participation and presence from key players at the huddle
- Huddles must be short and consistently held—brief but valuable time.
- · There must be a designated huddle leader.
- The time of the huddle must fit well within practice routine (e.g., not at the end of a long day).

Resources:

AMA Steps Forward

Establish medication refill protocols and guidelines

In many ambulatory practices, considerable time is spent processing medication refills. Developing and implementing a standard protocol to handle medication refills can eliminate several unnecessary steps and increase the efficiency of practice. In addition, it can improve patient satisfaction, as refill issues are resolved promptly, and enhance provider satisfaction, as administrative/ clerical responsibilities are minimized.

Implementation:

- Develop a standard medication refill protocol or guideline by building consensus among clinicians in a practice, service line or ministry.
- Monitor the efficacy of the protocol by tracking the number of staff to provider outreach events specific to medication refills.

Critical Success Factors:

- Identify a clinic Champion who will navigate among providers and help ensure protocol gets implemented.
- Practice needs to invest time on the front end to develop the medication protocols. This should be done using a number of providers.
- · Draft protocol should be circulated for input.
- To maximize success, it is important that there are a minimal number of "special situations" or "one-off" rules.
- . Pick a single "go-live" date for use among all clinics.
- Providers must buy in to use of the protocol. If providers won't support this, it will fail.
- · After implementation, team should review and modify protocol as necessary.

Resources:

Example of Medication Refill Protocol

Implement Leading with **Quality: The Ascension Way** and AIM4Excellence

Description:

Adopting lean techniques in the ambulatory setting has several advantages, including reducing or eliminating wasted time and resources, improving overall efficiency, and fostering team cohesion. Developing an understanding of lean and establishing a process improvement team will allow practices to identify opportunities to improve practice work flow and empower front-line staff to identify an improvement project.

Implementation:

- Roll out lean training to practice staff members.
- Establish a process improvement team
- · Actively engage clinical and clerical staff in a culture of continuous improvement by using Everyday Lean Ideas (ELI) worksheets to propose improvement ideas:
- Placing a list of physicians' glove sizes in each procedure room.
- . Enabling the medical assistant to set up the room with the correct gloves for the specific provider each day.
- Creating a "concierge card" that travels with the patient during their visit.
- · Letting the provider know who (family member, friend, neighbor, etc.) has accompanied the natient to the visit.
- Posting signage on restroom doors to alert Urology patients to report directly to check-in before using the restroom, making it easier to collect urine samples needed for a visit.

17 • Ascension Medical Group Clinician Well-Being and Engagement Playbook • February 2019

Critical Success Factors:

- Requires a high-level champion who can ensure that initiatives are moving forward.
- Requires a willingness for culture change.
- Celebration of "wins".

Resource:

Starting Lean Health Care

Best Practices: Personal Resilience

Best Practice 23:

Think about practices from a different perspective

them personally and professionally.

- Taking small steps devoted to thinking about a clinician's practice from a different perspective will help clinicians have a longer, more satisfying career and reduce their risk of burnout.
- Thinking about clinical practice differently can include creating a personal/practice mission statement; writing down inspirational patient stories; scheduling, in advance, events that will enrich an individual's life or the lives of those they care about; honing time management skills; considering how a clinician wishes to be remembered to spur changes in the way they currently live; and using appreciative inquiry.

Implementation:

- Collect and highlight inspirational patient stories that are meaningful to clinicians
- Incorporate appreciative inquiry into clinician meetings, retreats and other activities.
- Offer training and provide opportunities to practice advanced scheduling and
- Ask the right questions through a phase of discovery using the <u>LIFT Coaching</u> Model. After the discovery phase, identify concrete, actionable ideas that will move the
- organization/practice closer to its newly envisioned potential.
- Work with the team and commit to the aspirations they want to achieve. 18 * Ascension Medical Group Clinician Well-Being and Engagement Playbook * February 2019

Critical Success Factors: Ensure that clinicians feel part of a community that cares about

Investment:

• Take time to listen to concerns and develop solutions as a team.

· Make sure to recognize and celebrate contributions and

Resources:

<u>Assistance Program (EAP)</u>

Free program that provides clinicions support

Inquiry: Fosterin Positive Culture

Best Practices: Personal Resilience

Best Practice 24:

Offer community-building opportunities

Description:

A community brings people together to advocate for and support each other to overcome threats or to pursue common interests. As human beings, we need a sense of belonging, and that sense of belonging is what connects us to the many relationships we develop. These relationships may offer meaning, comfort and security. Ascension and AMG value community and encourage clinicians to find meaning in community. A leader's role in a Model Community is o share the story of Ascension and draw connection to our Mission and Values. Leaders should encourage "community and ministry" in their work group.

Implementation:

- Organize, participate in and promote community volunteer opportunities.
- Promote and participate in leadership development and formation programs.
- Highlight the work of clinicians participating in community activities and provide opportunities for them to share their work with others.
- Organize social events including spouses/partners for clinicians to participate in after hours.
- Establish a monthly potluck where team members can share dishes and time to get to know each other across shifts/roles.

19 • Ascension Medical Group Clinician Well-Being and Engagement Playbook • February 2019

Critical Success Factors:

- Encourage clinicians to prioritize being in community with peers, external community and vocation.
- Provide information about opportunities including volunteering and participating in medical missions on a frequent basis using bulletin boards or
- Allow clinicians to participate in leadership development and formation programs.

Performance Measures

Including measurements of well-being holds the potential to substantially improve not only the culture of our organization, but will ultimately result in improved clinician: well-being, satisfaction and engagement, and retention.

Since burnout adversely affects quality, safety, and health system performance, as well as the personal lives of clinicians, there is a need for ministries to add measures of clinician well-being to their routine performance measures:

- Growth
- Quality metrics
- Patient satisfaction
- Financial performance

Common Clinician Engagement and Well-Being Process Measures

	Type	Description/Definition	Data Source
Encounter Completion Time	Process	Purpose	Athena Care Check Report
		Actual Documentation Time/Patient	Cerner (LON/Advance)
		Time in Note per Note	Epic (Signal)
Same Day Encounter Closure	Process	Same Day Encounter Close (%)	Athena Care Check Report
Percent of encounters closed same day		Visits Closed Same Day (%)	Epic (Signal)
Pajama Time	Process	Time logged in the EHR after scheduled patient time	Athena Care Check Report
EHR Time Spent Outside of Patient Encounters		Post Visit Doc Time (%)	Athena Care Check Report
		% Time in EMR After Hours (6PM to 6AM)	Cerner (LON/Advance)
		% Time in EMR, Chart Review After Hours	Cerner (LON/Advance)
		Time Outside Scheduled Hours	Epic (Signal)
		Time Outside 7 AM to 7 PM	Epic (Signal)
Documentation Keystrokes	Process	Total Keystrokes (per encounter)	Athena Care Check Report
Keystrokes Per Encounter		Total Clicks per Note	Cerner (LON/Advance)
ntervention Assessment	Process	Measures how likely clinicians are to recommend an initiative to their colleagues (Net promoter score)	REDCAP

Common Clinician Engagement and Well-Being Outcome Measures

Measure	Type	Description/Definition	Data Source
Clinician Well-Being	Outcome	Assessment of overall clinician wellbeing as measured by the validated well-being index	AMG Clinician Well-Being Index
Clinician Satisfaction	Outcome	The Model Community Survey is one way to measure progress on our One Ascension	Model Community Survey
and Engagement		journey, Patient Safety, and Associate Experience all at one point in time. The Model Community Survey provides us with a broader picture of current state.	Results available in Tableau
Clinician Retention	Outcome	Calculated as the # of individual clinicians who remained employed for entire	Visier
		measurement period / # of employees at start of measurement period) x 100
