

Power Requirements

For any event where Inspire Generation are running sound and or light they will bring their own power distribution unit and power safe, water resistant, in/outdoor 16a power cabling with 13a adapters for it's services. This power 'distro' requires a 32amp source either from mains power or from a generator. Although adapters can be used from sources such as 13a for this, the power source required for an Inspire Generation show is often between 20amps and 28amps depending on setup. A large stage, full production sound and light show will certainly need a 32amp supply to ensure there is sufficient electricity. This power 'distro' requires a 32amp source either from mains power or from a generator. Although adapters can be used from sources such as 13a for this, the power source required for an Inspire Generation show is often between 20amps and 28amps depending on setup. A large stage, full production sound and light show will certainly need a 32amp supply to ensure there is sufficient electricity. Given plenty of notice we can bring 50m of strong, armoured outdoor 32amp cable to run between the source and the distro if required.

Distribution
INCLUDED

Cabling
INCLUDED

Supply **REQUIRED**

Mains 13amp supply
(Small Events)

Mains 32amp supply
(Medium Events)

20 KVA Generator

40 KVA Generator

60 KVA Generator

(Larger Events)
