

National Association for Children and Safe Technology

Newsletter | June 2016

Dear Members:

Although summer is a time for relaxing and enjoying outdoor activities with friends and family, many of us remain busy, working diligently on behalf of our children who deserve to attend safe schools that are free of wireless (microwave) radiation.

We have a new page on our website to address the issue of microwave weapons in school. We know this is a difficult subject to breach. It is critical however, that more parents become educated about the topic. Distinguished military members with expertise in microwave and electronic warfare are warning us and their message is very clear – wireless technology does not belong in our homes or schools. We sincerely hope you find this information useful as you advocate for children's health and safety. To access this information, please visit: <http://www.nacst.org/wi-fi-weaponry.html>

Timna Jacks

"A school program for gifted students is offering vaccination exemption forms and urging students to avoid Wi-Fi in schools, claiming that gifted kids have 'extra neurological connections' which make them more susceptible to allergic reactions."
