# MadarTech iVMS

## المدار لتتبع السيارات

### profile

**MadarTech**  
GPS iVMS AVL *We Got Your Back*  
*We got your back... in Real-Time*

## Helping you **secure** your assets 24/7- 365

We, at MadarTech Vehicle Tracking Solutions, are proud to introduce our state of the art solution for Vehicle Tracking and Immobilization for your Fleet, fully compatible with the requirements of ROP and TRA rules and regulations.

We are the first and only Omani company to offer our esteemed clients the GPS Tracking and Immobilization service on our Muscat Based Server, our tracking platform is absolutely user friendly and straight to the point, your needs to real-time tracking, pin pointing and immobilization of your fleet 24/7 and 365 days a year is our domain.

Some of the features of our products that are globally certified and type approved by TRA, are: they come backed up with a full 3 year guarantee, high sensitivity GSM and GPS antennas, small in size, fuel cut-off, over speed and geofence event generation.

We back up our Trackers with 24/7 customer support and technical assistance.

Please refer to the attached device features, specifications, presentation of uses and prices.

We look forward a long term business relation with your organization.

## HOW DOES IT WORK?

- Step 1: Location of the vehicle is received by the device from the GPS Satellites.
- Step 2: The device sends the location information through GPRS to MadarTech website
- Step 3: MadarTech site acquires vehicle's location on the map in real-time.
- Step 4: The fleet manager views the vehicle on the map & gets vehicle status.

## AND THE *PRICE*?

SIMPLE...

GET A QUOTE FROM US, COMPARE TO ANY PRICE IN THE MARKET, AND WE WILL BEAT THAT.

# WE GO THE EXTRA MILE

## OTHER STATE OF THE ART PRODUCTS

**IVMS, (in vehicle monitoring system),** or automatic vehicle positioning, this system allows the fleet manager or the administrator of the school to real-time track the whereabouts of the buses, run reports for a set period of time, generate historical routes for a bus, therefore analyze the driver behaviors, over speeds and geo-locations.

The school can pinpoint the house of each of its kids on the online map, when the child is dropped or picked up, an email or SMS notification would be sent to the interested person.

**Child drop-check,** the system works when the school bus driver drops the children in the morning at the school or when he drops the last child in the afternoon at home, the system will trigger an alarm inside the bus as soon as the bus driver switches the bus off, this alarm would not go off (even if the bus key was removed), unless the bus driver switches the alarm off by means of a special push switch located at the very end of the bus, at the last seat of the bus. Touching this switch while the vehicle is moving will have no effect, kids will try to play with the switch but it will do have any effect; the switch will be installed at the highest surface of the back side of the bus.

When the driver drops the kids and switches the bus off, the alarm sound will be triggered, annoy the driver, the driver will have to walk all the way back to the last seat, check the seats on his way, make sure no kid or child is left and then switch of the alarm.

**Offline Camera,** that starts recording upon vehicle movement, shooting **video** at wide angle, it will record every single move of the kids and passengers in the bus, and viewing of the recorded videos is possible by removing the SD card of the camera and inserting it in your PC or Laptop. This camera now comes in HD. No monthly subscription required.

This camera will allow the administrator to view and analyze the behaviors of the students and provide proof in case of misbehaviors of any kind, students will have different behaviors when they notice the camera (tested).

**Online Camera,** it is always on, but it will start shooting **images** upon sensing movement, is to say when there is any movement in front of it, it will take images, the good thing about it is that it will upload the images online where the administrator can see these images on his/her iOS or Android phone (an app is available). Furthermore, images and short videos are saved in the internal memory of the camera; these can also be copied to a PC or Laptop if connected by USB. This camera requires a SIM card, so it requires data connection; 5 Rials per month credit will be enough.
