APPLIED GEOSPATIAL ANALYTICS

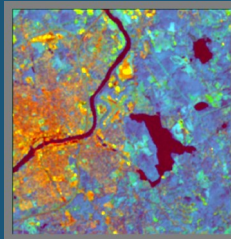

**Applied Geospatial Analytics (AGA)** is a full-service research consulting company located in Massachusetts. We investigate land cover changes in urban areas, forests, fields, wetlands, water, and coastal zones. We assess vegetation health, wildlife habitats, open spaces, storm, fire, or insect damaged areas, crime locations, proposed site placements, health care networks, roadways, and critical infrastructure assets.

We use leading-edge geospatial technologies to study data from our environment. These methods provide our clients with the means to support natural resource exploration, research, land conservation, preservation, planning and management efforts. AGA also conducts public health, business, real estate, legal & law enforcement, insurance valuation, economic, demographic research, and promotes sound policy development and implementation.

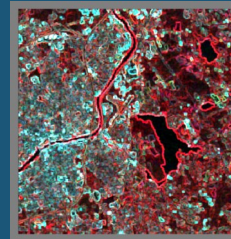

AGA is committed to providing assistance to our clients throughout the many phases of planning, management, and the decision-making process.

Contact us to find out how our services can help you to design and perform your own geospatial analytics.

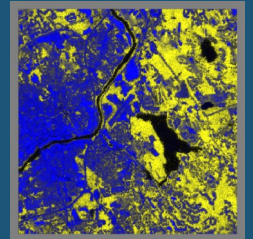

**-Peter S. Tardie, Ph.D., Founder and President**
