

*Thank you* for choosing K-9 Capers! We try our best to bring you the most current and up-to-date training techniques taught by leaders in the industry such as Dr. Ian Dunbar, Karen Pryor (from Sea world) and other board-certified animal behaviorist such as Dr Weiss, Dr Suzanne Hetts and Dr. Sophia Yin. The common thread is positive reinforcement training using your dogs drives', such as play, hunting, food and toys. We do not use force or shock-collars, prongs or other punishment based devices.

In order to serve you effectively, we ask you complete the following few questions:

- Need a brief description of the dog(s) in question age, breed, health, last veterinarian you visited: Use the back of the page or another page if needed:
- Behavior(s) you want to change:
- Behaviors you like:
- How long has the issues(s) been going on?
- What methods you have used to deter/or change the behavior?
- Prior trainers and methodologies:
- Do you understand what positive reinforcement training is and how it is used?
- Have you had dogs before? If so how long ago?
- Has this dog bitten anyone or been in a serious dog fight?

Please make your veterinarian records available, and any other valuable information you may find helpful: If you are coming in for a full assessment you will need to bring wet and canned food for the testing and any toys that are most valuable to your dog.
