

Trainer Airplane Suggestions

This is just a small selection of trainer airplanes. Most trainers are electric powered, but gas and nitro powered ones are also available. Almost-Ready-to-Fly (ARF) models will take one to ten hours to complete depending upon the model. Some take nothing more than charging the battery to get it ready for flying. Generally, the larger the wingspan the easier it is to fly and the more wind the model will handle. A wingspan of 60" and above is a good size. Don't be tempted to start with something small or fast or inappropriate for a beginner.

Woodland Aero Modelers offers free flight training using the buddy-box method. The instructor's and student's radios are linked, and the instructor can take control at any time. Mastering take-off, landing and basic flight should not take you too long.

Come along to one of our **Open Houses on June 9th or July 15th**, from 11am – 3pm, or contact John Baderman 630.408.6668 jb@baderman.co.uk to arrange an introductory training flight at another time. **Check our website in case of cancellation due to bad weather.** www.woodlandaeromodelers.org

- **Apprentice** – 59" wingspan – SAFE technology with 3 flight modes – Z-foam construction – 3 cell electric – easy install floats also available

Ready to Fly package includes radio, flight battery and charger **\$280**

Bind & Fly package without the radio **\$250**
