## **DUST COLLECTION AND POLLUTION CONTROL**

### **Operation Logic**

Upon fan start power is supplied to the control board, and the “pre-set” off time is initiated. At the end of the “off” time, the control energizes a solenoid that provides the cleaning pulse for the filter tubes, and then steps to the next segment. This cycle is continuous unless an auxiliary control, such as a pressure switch is used to control the timer.

**16 oz. Gradient density polyester filter bag**

**24 Bag Cup, Zinc Plated: 20ga.**

**24 Venturi, Carbon Steel**

**Pulse Jet Timer board**

**Pressure Gage**

  
**Integral Dust  
Collector**
