How America's Newest Stadium Launched Americas Newest Cleaning Technology

Levi's Stadium,

the \$1.3 billion dollar steel and cement structure that resides in the heart of the Silicon Valley was constructed to cheer on the San Francisco 49ers and be the premier entertainment venue in the high tech capitol of the world.

This technological tour de force even had its very own app developed to include parking lot assistance, no line restroom locator, food and drink order placement and a feature that allows fans to watch instant replays from multiple camera angles on any smart device within the facility.

- Silicon Valley, America's high-technology epicenter has been at the forefront of innovation since the advent of the microprocessor.
- It should be no surprise that the newest cleaning innovation in the building maintenance industry would also be developed by a California-based startup and launched on opening day in this brand new high tech stadium.

The maintenance requirements for this gleaming new stadium seemed to be straightforward, but proved to be much more demanding when the 30 freshly installed high end escalators were taken into consideration.

The issue of spilled drinks has always been problematic. The slippery surfaces can expose ownership and management to hazardous, legal, and aesthetic concerns. When a drink is spilled, a cleaning system would need to be deployed, the issue resolved, and the system moved out of the way in minutes, so as not to block the flow of foot traffic during an event.

All current escalator cleaning machines were deemed too large, too heavy, too hard to use, and most importantly, they all required power, creating a secondary hazard of exposed power cords. Some machines required multiple operators and some required the escalator be shut down, but all took far too long to get the job done and get out of the way.

From the birthplace of Apple, Tesla, and Facebook, REN, a California based engineering & licensing firm specializing in cleaning innovations, delivered a solution that proved so fast, so effective and so easy to use, that multiple systems were purchased and put to use on opening day.

REN, the 5-minute, single operator, lightweight and portable escalator cleaning system, the choice of Americas newest and most technologically advanced entertainment venue, Levi's Stadium, is now available world wide.
