

Bowhunting Quiz 1

TRUE OR FALSE

1. "Shocking Power" is an important factor in harvesting a deer with archery equipment.
2. The elimination of sport hunting would have no adverse affect on the population and health of a deer herd.
3. In areas where tree stands are legal, the best type is a solidly-built permanent stand.
4. When hunting from a tree stand, a safety belt or restraining line can give the bowhunter shooting opportunities that he would otherwise have to pass up.
5. A pair of normal, healthy deer with no disease, predation, hunting, or unusual deaths will produce a herd of 40 deer within 7 years.
6. Most extinct or endangered animals got that way because of sport hunting.
7. "Still-hunting" means finding a productive place and waiting there for game to move to you.
8. Only hunters far from civilization should carry a survival kit.
9. Buck scrapes are areas on saplings where bucks have removed bark by rubbing their antlers.
10. An experienced bowhunter can determine whether a deer has been fatally hit by the amount of blood he finds on the ground as he tracks the animal.
11. In field-dressing a deer, the first two things to do are: 1) slit the throat, and 2) cut the "musk" glands from the hind legs.
12. A broadhead tipped arrow embedded in the chest cavity of a person should be removed immediately.
13. The recommended shot at deer and other big game is the lung area of the animal's chest cavity.
14. Bowhunters should practice regularly with hunting equipment, and at varying distances prior to the opening of deer season.
15. Predators are virtually extinct, and play no significant role in wildlife population levels either increasing or decreasing.

MULTIPLE CHOICE

16. The most common type of bowhunting accident is:
 - a. Shooting another person mistaken for game
 - b. Injuries to self and others caused by improper carrying of broadheads
 - c. Those caused by so-called "sound shooting"
