TERMS & CONDITIONS:

Powder Coating prices are subject to changes and are only to be used as estimates.

Prices include the following:

- Abrasive Blasting
- Pre-Treatment of your part (Outgassing, Degreasing, etc)
- Standard Masking
- Capping & Plugging of threaded holes
- Single Stage Powder Coating Finish

Prices **DO NOT** include the following:

- Disassembly of parts
- Custom Masking
- Multi-Stage, Candy (Add 30%)
- Transparency (Add 30%)
- Primers (Add 30%)
- Clear Coats (Add 30%)
- Damage Repair
- Non-Standard Powders

****Clear Coat is required to be used on all Chromes and Metallic Based Powders. These powders have microscopic flakes of metal in them and will oxidize / rust without it. A base coat is required for Candies or Transparencies. Without it, it will not shine like a Candy should. The base coat can be powder coated Chrome / Silver, Actual Chrome or Polished Aluminum.**

Please Note:

Parts must be able to withstand temperatures of at least 500 degrees for an hour and must be free of plastics, rubber, grease, and grime. Tolerant sensitive parts such as rifle barrels and certain engine components are not warranted if they are heated out of tolerance. Any solder, plastic, rubber or unknown that the customer doesn't remove, warn about, or notice will not be warranted if it is hardened, melted or otherwise ruined in the baking stage. Out-Gassing – Pot metal, magnesium, cast aluminum and other cast parts have impurities left in them from the time they were cast. These impurities will be released when the part is heated during the powder coating bake process. This “out-gassing” process is a common problem with powder coating and we try our hardest to prevent it from happening by pre-baking your part to try and release as much of it as we can. Unfortunately, there is no guarantee that the cast part will be free of these “out-gassing” bubbles during the baking process. An optional primer can be used for an additional cost to help prevent this from occurring.
