

Tarrant County College[®]
SUCCESS WITHIN REACH.

HORTICULTURE

About the Program

Tarrant County College's Horticulture program prepares students for success in a growing industry that makes significant contributions to the natural beauty and health of the world by blending education, social responsibility and environmental stewardship with the art and science of horticulture. While preparing students for traditional employment opportunities within the industry, TCC also presents 21st century trends in the field relevant to general sustainability, environmental stewardship and the health benefits of establishing an edible garden both locally and globally.

Market Demand

In addition to learning about sustainable environmental stewardship techniques, TCC graduates may work in residential and commercial landscape installation and maintenance, urban tree service, forestry services, parks, grounds keeping and golf course maintenance.

Additionally, there are numerous opportunities in retail, wholesale and nurseries, as well as residential and corporate design and consulting. You can learn more about the horticulture industry from these professional associations:

American Horticulture Society
– www.ahs.org

The American Society for Horticulture Science
– www.ashs.org

The Botanical Association of America
– www.botany.org
