

Dyna Gain

Forage Diploid Annual Ryegrass

Dyna Gain is a strong performing, diploid annual ryegrass that exhibits high forage yields and exceptional persistence even under cold and drought conditions. Dyna-Gain has improved disease resistance particularly to crown rust providing improved forage production throughout the spring. Its outstanding root structure makes it ideal for cover crops to improve soil tilth, create root channels and pull up excess nutrients from the previous crop. Dyna-Gain is highly digestible and will provide ample nutrition for all livestock animals.

Application

- Cover cropping to improve soil tilth, increase root channels and hold excess nutrients from previous crop
- Early spring grazing

MANAGEMENT

- Seeding Rate (pure stand): 30-40 pounds per acre
- Seeding Rate (interseeding): 15-20 pounds per acre
- Seeding Rate (covercrop): 10-15 pounds per acre
- Planting Depth: 1/4—1/2 inch

FEATURES

- Vigorous, fast growing roots
- Excellent seedling vigor
- Crown rust resistance
- High quality

BENEFITS

- Excellent for cover cropping and grazing
- Rapid ground cover to reduce weed competition
- Improved quality and grazing period
- Improved animal production
