

Senior NHS Manager

SUMMARY

A highly experienced senior NHS manager with over 30 years working across various sectors in healthcare. My career can be best described in three buckets: Firstly, with 17 years working in various Acute laboratories, I worked as a registered biomedical scientist in clinical biochemistry; Secondly, I retrained as a Quality Manager staying within the Acute setting focusing on regulation and compliance; and, Thirdly, I worked within Clinical Commissioning Groups focusing on clinical commissioning, contract management, patient safety and compliance. Since December 2018, I have added a fourth bucket and moved into Operations. I am a keen motivator and people manager thriving on developing and leading staff to work at their full potential. I have a very positive approach and consider myself to have excellent communication skill and I am comfortable at liaising at all levels, including groups.
