

## Now that's a switch.

For your convenience and peace of mind, QMotion® Wall Plates can hold remote controls and transmitters securely with a powerful magnet, and allow them to be used as a wall switch for a third level of control for your shades, if you prefer that to handheld. They also provide a simple way to avoid misplacing or losing your remotes. For a more permanent wall placement, the QMotion® Wall Station Adapter keeps your remote secured and protected with a screw mount so it cannot be easily removed.

- Wall plates are of the same design as standard wall switch plates, are flush mounted and do not require cutting a hole in drywall or other mounting wall finishes.
- QMotion® Wall Docking Stations are available in Single, Double or Triple gang versions for the single channel five-button remotes and single or double for the multichannel transmitters.
- The Wall Plate Adapter screws over the sides of either the five-button or multichannel transmitter to secure it in place.

QMotion® has something for everyone: Wall Plates to offer optional handheld or wall switch capability and less likelihood of misplacing your transmitter or remote, and Wall Plate Adapters for public spaces and hotel rooms to add security and protection.

*A wall plate for our Multichannel remote with adapter can make for a clean and secure "switch."*
