25

Name _____   Date _____

1. Complete the equation by using unit form and whole numbers. Write the quotient in standard form.

$$1.3 \div 0.2 = \underline{\hspace{2cm}} \text{ tenths} \div \underline{\hspace{2cm}} \text{ tenths}$$

$$= \underline{\hspace{2cm}} \div \underline{\hspace{2cm}}$$

$$= \underline{\hspace{2cm}}$$

2. Divide. Use unit form to help you. Write the quotient in standard form.

$$5.2 \div 0.16 = \underline{\hspace{2cm}}$$

3. Complete the equation. Write the quotient in standard form.

$$8.91 \div 0.06 = 8.91 \div 0.01 \div 6$$

$$= \underline{\hspace{2cm}} \div \underline{\hspace{2cm}}$$

$$= \underline{\hspace{2cm}}$$

REMEMBER

4. Use >, =, or < to compare the expressions. Explain how you can compare the expressions without evaluating.

$$\frac{5}{6} \underline{\quad\quad} \frac{2}{3} \times \frac{5}{6}$$

5. Explain why the number sentence is true.

$$\frac{8}{7} \times 6 > 6$$
