**DAMON
HOWATT**

EL DORADO T/D THE REVOLUTIONARY TAKE DOWN BOW BY DAMON HOWATT

The El Dorado T/D offers more new concepts than any single bow design Damon Howatt has ever produced. Even the terms used to describe its many features differ from standard archery terminology. The conventional handle becomes the bow frame and is made of cast magnesium. The unique clear-view shooting platform replaces the conventional handle riser shelf. The integral pressure point device gives the archer full control over its position and sensitivity.

At a glance, you immediately sense that here is a take-down bow of unusual beauty. The clean, spectacular lines present a striking appearance. But the real test of this revolutionary bow is its truly remarkable performance. The Howatt El Dorado T/D is a thoroughly engineered and refined design—one that shoots with exceptional accuracy, smoothness, and consistency.

Visit your Howatt dealer, test shoot it . . . and you'll be convinced.

**DAMON
HOWATT**
Archery Manufacturing, Corp.
P. O. BOX 2637, YAKIMA, WASHINGTON 98902

Limbs on the El Dorado T/D are normally attached to the bow frame with a socket head set screw but this chrome plated thumb screw is available as an option.

From the archer's view, you will note the clear, unobstructed sight line over the shooting platform which carries the grip, stabilizer and pressure point device.

Although the stabilizer is an engineered component on the El Dorado T/D, an optional, fully adjustable prime weight unit is available. This unit permits the archer to "tune" the stabilization to a fine point.

This fully adjustable pressure point device is standard on the El Dorado T/D. Both the position of the device and pressure point sensitivity are completely adjustable. A draw check attachment is optional.

SPECIFICATIONS and OPTIONS

Available with 66", 68" or 70" limbs.

You And Your Archery Equipment

Your enjoyment of the wonderful sport of archery will be greatly enhanced if you use care in the selection of the proper equipment. Whether you plan to take up bowhunting, target shooting or simply wish to enjoy some occasional recreational archery, your ability to consistently hit the target depends on both you and your equipment.

Essentially, it is the perfection of archery's fundamentals of draw, anchor, aim and release which produce satisfactory results. With hours of practice, you or anyone can become an excellent

shot. In the beginning, seek out a competent instructor and take advantage of his knowledge. Have him assist you in developing those essential fundamentals so that your practice sessions will be most productive. Your instructor and your HOWATT dealer will also be helpful in the selection of the proper equipment for the kind of shooting you intend to pursue.

Choosing Your HOWATT Bow

Too often the beginning archer selects a bow that is too heavy. That is, the bow has too heavy a draw weight for the size and strength of the archer. The best way to determine the right draw weight for your bow is to select a weight which you can hold at full draw, without quivering, for 10 seconds. Be sure you're not underestimating your strength before you make the final selection. Once the proper draw weight has been found, you will then match arrows and other equipment to that weight.

Your Arrow Length

To select your proper arrow length, use a special measuring arrow which most dealers have. This arrow is marked off in one inch increments. When your bow is drawn normally, the correct arrow length is indicated on the measuring arrow where it stops at the front of the arrow shelf.

One more thing you should be aware of is the variation in draw weights as they are affected by draw length. Normally, draw weights are calculated at 28" draw. Each inch of draw, either more or less than the standard 28", affects the draw weight by 2 pounds. For example, if you have a 40 pound bow and a 29" draw, you would add 2 pounds to the draw weight. If your draw is only 27" you would subtract the 2 pounds making your actual draw weight 38 pounds. Both your draw and the draw weight of your bow are important in the selection of properly matched arrows.

No Secrets

With the proper bow, matched arrows, and the right accessories for your kind of shooting, it's all up to you. Remember those fundamentals—draw, anchor, aim, and release. There are no secrets to successful archery. With the right equipment, practice, and a consistent application of the fundamentals, the results will be rewarding.

Howatt Custom Stabilizer.

A precision engineered archery accessory that provides peak stabilizing efficiency. Finish is a distinctive black and gold. Available in 21½" length weighing 8 ounces and 17½" length, 7 ounces..... **12.95**

Howatt Custom Hunting Stabilizer.

The Flex-Connect provides a flexible connection between the Custom Stabilizer and the handle riser. It acts to cushion both limb shock and stabilizer reaction at time of release. Like the Howatt Custom Stabilizer it is finished in black and gold..... **9.95**

Stabilizer Insert.

HOWATT GUARANTEE

Each HOWATT bow is fully guaranteed against glass failure or delamination during normal use for one full year and replacement or repairs will be made for 50 percent of the retail cost during the second year.

IMPORTANT — No adjustment will be made when breakage or failure is due to abuse or mishandling. Otherwise, should failure occur, please contact your dealer or DAMON HOWATT ARCHERY MANUFACTURING CORP., for instructions.

All prices are F.O.B. Yakima, Washington. Specifications and prices are subject to change without notice.

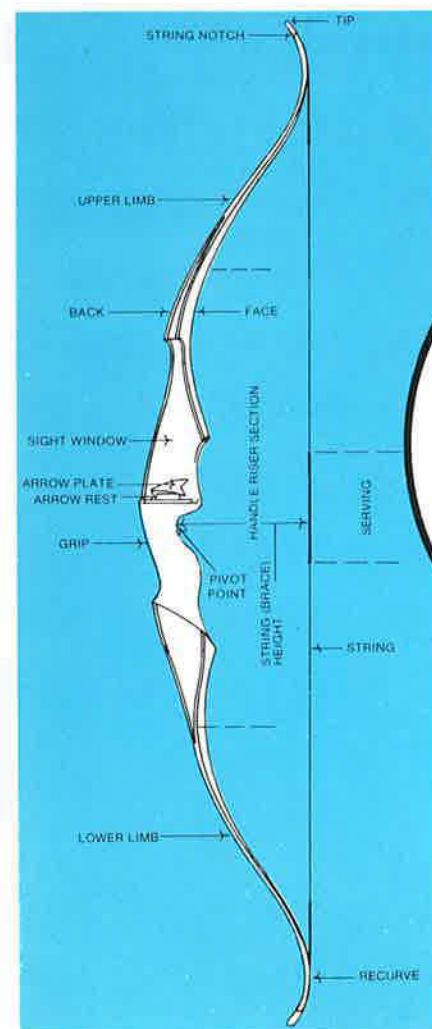

Terms are net 30 days, however all orders will be shipped C.O.D. unless order is prepaid or open account has been approved by HOWATT.

Minimum order is \$5.00.

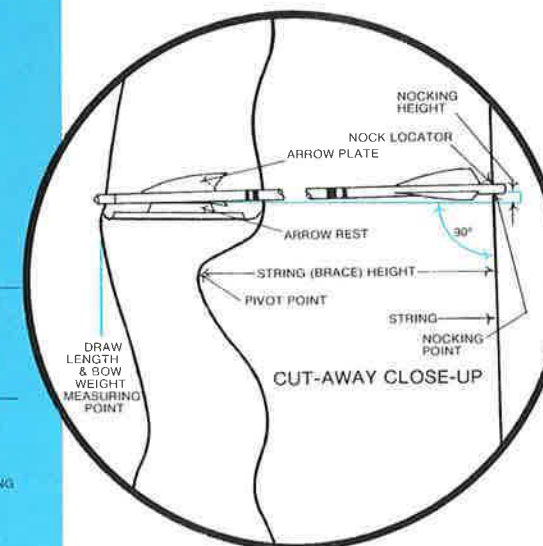

No returns will be accepted without proper authorization from HOWATT ARCHERY MANUFACTURING CORP.

We urge all HOWATT bow owners to use a bow stringer to string their bow. In lieu of that, use a method of stringing that will minimize the twisting of the bow limbs—the cause of most bow breakage. Fistmele (brace height) is so dependent upon the style of the shooter that it is impractical to specify fistmele measurements for HOWATT bows. HOWATT bows are equipped with strings that will provide proper fistmele in most cases. Because of a particular shooting style, it may be necessary to tighten the string by twisting it to obtain maximum performance.

All HOWATT bows are made of the finest materials available. These exceptional materials together with more than 25 years of bow making experience are combined to produce the world's best performing and most beautiful line of modern bows.

Archery Nomenclature
