## THE ABC'S OF FALL PROTECTION

A typical Person Fall Arrest System (PFAS) incorporates three components, often described as the ABC's of fall protection. The anchorage connector, body support, and connecting device, when used together, form a complete system for maximum worker protection. But don't forget about another required component of any fall protection program – descent, rescue, and retrieval of a fallen worker.

**A**nchorage is a secure point of attachment. They must be able to hold fast under more than a ton of force generated in a fall.

**B**ody support harnesses distribute fall forces over the upper thighs, pelvis, chest, and shoulders. They provide a connection point on the worker for the PFAS.

**C**onnectors such as shock absorbing lanyards or self retracting lifelines connect a workers harness to the anchorage.

**D**escent and rescue devices are used to retrieve an injured worker or lower him to the ground.

## FULL BODY HARNESS APPLICATIONS

CSA STANDARD Z259.10 DIVIDES HARNESSES INTO 5 CLASSES:

### CLASS A

#### PERSONAL FALL ARREST

Class A full body harnesses are designed to support the body during and after the arrest of a fall.

### CLASS D

#### SUSPENSION AND CONTROLLED DESCENT

Class D full body harnesses are designed for suspension or controlled descent from a height.

### CLASS E

#### LIMITED ACCESS (EVACUATION)

Class E full body harnesses are designed to support a worker in a position that reduces the worker's profile during passage through a limited access area.

### CLASS L (LADDER)

#### LADDER CLIMBING

Class L full body harnesses are designed for use with fall restrict systems involving the use of a fall arrester that travels on a vertical lifeline or rail.

### CLASS P

#### WORK POSITIONING

Class P full body harnesses are designed to position a worker during a work operation.

Electrical insulating gloves must be inspected before each use. Inspection is simplified by using a portable glove inflator such as the Salisbury G100 with adapter for Class 00 and 0, and smaller size gloves, patent pending.

- Simple, easy to use
- Provides a quality means of inspecting gloves in the field
- Glove is secured to the inflator using a nylon strap and fastened with hook and pile, or a rubber O-ring
- Inflation is accomplished by pumping the bellows of the inflator
