

**AI-TRONICS**

# Saorada

**INTEGRATED VIDEO INTELLIGENCE**

# The physical security development tool for the next decade and beyond!

Sagrada is a robust development platform that empowers physical security device manufacturers and system integrators by providing a highly configurable embedded systems middleware accompanied by a simple mobile device framework designed for the demands of PSIM and IoT systems. Shorten your time to market, reduce development cost by choosing Sagrada.

- Provide ability to build embedded devices with pre-built industry specs and protocols - ONVIF and BACnet in the form of flexible Client/Server API architecture
- Powerful mobile API use for creating Hybrid VMS, Access Control and Building Management Work Stations
- Provides support for secure IoT frameworks based on Open Connectivity Foundation industry standards which can be used across mobile and embedded devices
- World-class expert support options for corporate partners and Independent developers

# Key Features

**Device Software Developers.** Sagrada™ OS is ideal for physical security and building automation developers seeking to the ability to build a wide range of integrated and stand-alone full-featured controllers, networked appliances, and sensor driven devices. With pre-built ONVIF and BACnet API libraries; developers can easily pick and choose which specification components they need while having the option to add new value using IoT protocols.

**Mobile Software Developers.** Sagrada™ Mobile provides a robust set of native-based ONVIF, BACnet and IoT API libraries as well as the ability to re-use the Sagrada OS libraries. Sagrada Mobile securely integrates into leading camera and VMS manufacture products and will produce a stand-alone mobile-VMS or BACnet compliant cross-domain advanced workstations (i.e. B-XAWS).

# Integrated Product Solutions
