T R E E - Vandalism

It's time to '**Save Trees**' end Tree Massacres! SAVE Trees
Stop reading print: Newspaper, Magazine, Book, junk mail, memo,...

A tree is a perennial plant. Has roots, stem or trunk with or without leaves. Trees often grow in groups, with other vegetation create a Forest. Forest's provide habitat for creatures microscopic to big.

Trees reduce erosion, moderate climate. They remove carbon dioxide from the air and store it in their tissues. They have a role in the maintenance of biodiversity and a balanced ecosystem. Trees provide shade, timber for construction, furniture...

There are 2 main forest types. The Taiga north of the tropic of Cancer. Tropical rain forest between Tropic of Cancer and Tropic Of Capricorn. Forest destruction is to end. The reason for the destruction is not what matters. The destruction is what matters.

The existing Forests especially the Taiga and Tropical rain forest are to be preserved. These Forests are essential for human well being, survival. Countries who have sovereign rights over these Forests need to protect these Forests. Failure to do so results in accountable and replacement of Government. If this fails Country loses its sovereign rights over Forests. The international community takes over.

Tropical rain forest is the most bio-diverse habitat. Tropical rain forests are the lungs of our planet, Earth. Clear cutting, burning to increase land for agriculture is a threat to a healthy atmosphere. Another threat to trees are religious rituals.

Some Forest are replaced with single specie trees. This destroys biodiversity. Christians replace bio diversity with single specie trees (Christmas-trees). They chop trees to celebrate the birthday of a dead false messiah.
