

Recoil Enable Training Gun: M9

Bring the range to your home and office – the only training pistol on the market with recoil and sound that will let you train as if you are in the range, without range fees.

Professional tactical training for home defense is now easier than ever. Train safely with your family and friends for real scenarios and realistic drills, with no need to cycle the gun, anytime, anywhere.

The recoil enabled training pistol includes a KWA M9 PTP gas blow back airsoft pistol (fits many of the Berretta M9 holsters) with the Recoil Enabled Airsoft Laser (REAL) drop in barrel and a vibration activated SureStrike™ cartridge (choose between red or IR).

Pair the training pistol with the I-MTTS and the Smokeless Range® simulator for a full tactical and judgmental training session with 100% safety.

Continue to train outdoors with pellets: the package includes the original barrel of the M9-PTP to allow for an easy conversion for a best-in-class airsoft that allows for more training outdoors.

* The gun comes fully assembled with the Laser conversion barrel and Laser.

** Green Gas not included. Please make sure to buy one in order to operate the training gun.

*** If using the Smokeless Range with any airsoft pistol, we recommend using an IR SureStrike™ Vibration Cartridge.
