

SPIDER DIAPER

(arachnid poop catcher to protect your boat)

Oklahoma BoatLifts & Sales

OklahomaBoatLifts.com

1-888-OK-LIFTS

This netting has been up for months and you can see how clean the boat is. The boat stays uncover all the time.

Netting shown is one of the first designs at my boat dock on Lake Eufaula. This netting has been up for several months.

This a blow up of the netting and you can see the arachnid poop.

Installation Instructions:

1. Place netting so that name tags are facing down, so when the netting is in place, you can read the tags.
2. Start the installation at the end of your dock tying the rope to the netting (make the knot so the net will not slip and then to the dock column make several wraps around the column).
3. Then start tying the ropes to the netting and the to the column and show below.

4. If the column falls in between the netting loops and tie as shown below

5. Continue until all the netting is completely installed.
