

Build This Wall Pledge

1.0 Elected Office

1.1 - In the capacity of a Border Mayor, Federal legislature, or State Governor, I pledge to promote the use of economic development to help solve an urban and rural border security problem along the U.S. - Mexico Border Region.

2.0 Urban Border Wall

2.1 - Urban Border security can be solved with a combination of border walls, fences, glass screening, raised platforms, cleared land, or other structures architecturally designed and approved by Homeland Security, which all combinations are to both promote **(2.1a) physical security** as well as **(2.1b) civic use**. Some necessary walls may even encircle (**Circle Wall**) precious borderland assets or private land. Urban centers submit the kind of combination protective wall they desire based on security expert design and recommendations submitted to Homeland Security (security protocols) and 2nd organization (development and civic use protocols) for approval.

2.2 - Urban Border Security for civic use can be enhanced with electronic surveillance systems - CCTV, lighting, drones, AI, and improved border centralized resources such as the El Paso Intelligence Center (**EPIC**) located within a Military Reservation as part of transferred Homeland Security permanent funding and resources. Other resource transfer can involve FBI, CIA, and National Security Agency. EPIC takes on a new role of civic use border monitoring, leveraging the expertise in joint law enforcement agency cooperation across the entire USA / Mexico border. Federal police will patrol with city police.

2.3 - Urban Border security requires both sides of the border to build an Urban Border wall so there are **two protective barriers**, patrolled by both nations, and **used for civic purposes**. Both the USA and Mexico governments help pay for their Urban Border wall. Private enterprise helps pay the cost of an overall development of this borderland to take advantage of the civic use and maintain a **tax base** to pay for city police.

3.0 Rural Border Wall

3.1 - Rural Border security can be enhanced with a new clean front line away from the border between Mexico / USA consisting of a **remote fence** and **interstate highway** running the entire east and west in northern Mexico. The Mexico / USA border is a crossing point for consumption into interior USA and supply from interior Mexico. Thus, the line of defense is an arbitrary line along the Mexico / USA border.

3.2 - Another **strategically based arbitrary line** of defense can therefore be move further south.

3.3 - Expanded economic opportunity from transportation link will expand the tax base which will pay for this highway and maintenance of this rural fence. Economic opportunities will be available for mass use of open land along the northern side of the fence by way of farming, solar or wind farms, oil and gas exploration, and any economic activity that polices their property and requires few people to stay there on a permanent basis.

3.4 - All new enforcement will be met at this new frontier line and **asylum cases** will be processed in towns near north / south entry points of the east / west frontier highway.

3.5 - No towns can be within 5 miles of the frontier highway.

3.6 - A zone will exist between the new frontier fence / highway and Mexico / USA borderlands. Persons prosecuted for committing illegal acts related to cross border activity **will not be allowed to live in this zone.**

3.7 - Mexico pays for the frontier highway and fence as part of a negotiated advantageous NAFTA trade in return for USA access to create jobs in northern Mexico as a protected US based small business entrepreneur class using USA federal regulations and programs available in the USA but expanded into northern Mexico. This includes most industries.
