

BallistiClot[®] 100

Injectable Hemostatic Paste

NO WOUND ENLARGEMENT REQUIRED

Applications

- Military
- Police
- EMS
- First Responders
- Surgery

Indications for Use: For emergency external use as a sterile temporary treatment of ballistic or puncture wounds to achieve hemostasis in cases of moderate to severe bleeding.

- FDA K082601
- US Patents 8409629
8609129
9474652

How it works:

1. Place catheter tip in entry wound
2. Inject rapidly
3. Apply manual pressure
4. Clot forms rapidly
5. Bleeding stops

“... BallistiClot has unique hemostatic characteristics that have been successfully demonstrated to be efficacious to arrest arterial hemorrhage. The method to deliver this agent is very unique and has great application treating indirect wound track combat injuries.” Brad L. Bennett, PhD., FAWM, FACSM, CAPT MSC USN (RET.), Research Director, Deployment Medicine International

BallistiClot[®] 100 Advantages

- ◆ Stops bleeding rapidly
- ◆ No wound enlargement required
- ◆ Effective on small entry wounds
- ◆ Effective even with exit wounds
