

Beba's Dual Cutter

Caution Cut Hazard: Sharp Blade. Contact may result in injury
Always keep blades away from fingers and body. Handle with care. Keep out of reach of children.

Cutting a perfectly measured strip of fabric has never been easier with the Beba's Dual Cutter. Use the built in ruler to adjust to the exact size desired, lock in place and cut-accurate each time! Beba's Cutters accommodate the right-and left-handed user. See instructional diagram below for easy set-up and how to convert your dual cutter into a single.

SET-UP for Dual & Single Cutter

Included in the package is the following: 1 rotary cutter handle, 1 plastic cube, 1 single "Q" blade, 1 measurement bar with 1 single "Q" blade attached.

To set-up a single cutter for a right-handed individual:
Take the rotary cutter handle and place the plastic cube into the right of the handle, then attach the single "Q" blade on the opposite side. View the photo below, taking special attention to the placement of the black nut.

To set-up a single cutter for a left-handed individual:
Take the rotary cutter handle and place the plastic cube into the left of the handle, then attach the single "Q" blade on the opposite side. View the photo below, taking special attention to the placement of the black nut.

To set-up a dual cutter:

Take the rotary cutter handle and single "Q" blade on the measurement bar, following along with the picture, place the second single "Q" blade opposite the handle.

*Please ensure that the handle is locked directly in the center of the measurement bar.

Now you are ready to adjust the "Q" blades to cut a specific strip measurement.

Positioning your "Q" blades for a specific strip measurement:

Adjust the "Q" blades by loosening the screw of each and moving the outside of the blade face to the desired measurement and tightening the screws. 1/4" seam allowances are included in the set measurement. (See below an example for a 3" strip with 1/4" seam allowances: Total finished strip cut is 3 1/2").

(1/4" seam allowances are included in the set measurement)

SAFETY & STORAGE

Store rotary cutter in a closed blade position by pushing the security locks of each blade to the forward position. If you find the security lock is difficult to move to the forward closed position, slightly loosen the black, round nut. Keep cutters and blades out of reach of children. Keep cutting surface clear of hard objects, such as pins, to avoid nicking the blade during use.

BLADE REPLACEMENT

Take apart your cutter one piece at a time, laying out the parts in proper order and the correct position as they detach. Reassemble with new blade. *Please ensure the ruler guide is parallel to the tip of the blade before tightening the nut.

Dispose of old blades using the package that the new blade came in; tape it securely together and dispose. BEBA'S blades are made of the highest quality tungsten carbide tool steel for a razor-sharp edge. Caution must be used! Contact may result in injury. Handle with care.

CLEANING INSTRUCTION

Carefully remove the blade. Remove lint build-up from the blade and handle. Apply a drop of sewing machine oil around the center of the blade before reassembling. Caution must be used! Contact may result in injury. Handle with care.
