

“Mobile Stage”

This custom built mobile stage provides a highly mobile, quickly set up stage for your performers. It is mounted on a 4 wheel trailer with an 8 foot by 20 foot main platform plus a 4 foot by 20 foot back board. All of it is fastened to steel framing, and during transport the hinged back panel is secured by metal straps. Once on your site the rear panel is folded flat with the main stage panel giving a 12 foot by 20 foot smooth surface for your performers.

Leveling is accomplished via six, 2,000 pound leveling jacks mounted to the steel frame. Once set safety rails drop into pockets at the stage rear and the steps are secured. The finished unit is wrapped with black scrim to hide the all important trailer and tongue parts. This tows on a 2” trailer ball. This unit finishes approximately 2 1/2 feet high above ground.

Shown below with optional 20 ft x 20 ft commercial tent canopy over it for shade. This option has additional rental and erection fees. Also, it is available with two 10ft x 10ft canopies on the stage itself.

No insurance of any kind is included with this equipment.
